Foreword from the director

The first thought that comes to my mind when starting this foreword is, "YES, InnoRenew CoE is moving in together, in the biggest wooden building in Slovenia!"

Our new building is not just a building, either – it is a demonstration of our knowledge and a research object itself that will help us deliver new knowledge and contribute to the future development of the built environment.

Joining together in our new building is so important because collaboration is the key to achieving the scientific breakthroughs that will help society overcome the climate crisis. The new building will not only help us collaborate but also elevate our presence in international networks. We have already built an informal international network related to structural health monitoring projects of innovative timber buildings. We partnered with Oregon State University, the University of Primorska and the University of Helsinki. Within this network, we can apply many of our areas of expertise to show the value of interdisciplinary science in the built environment. We will collect first-hand data on some unique and innovative structural systems and develop benchmark data for further applications and cross-reference with other projects. With the aim to co-create a greener future, we also became a partner of the European Commission's New European Bauhaus initiative and connected researchers and professionals from over 30 countries in the new COST Action CA20139 – Holistic design of taller timber buildings.

We know that getting the most out of our scientific and outreach work means we need to support the organization with good management practices as well. In 2021, we went through the European Foundation for Quality Management (EFQM) evaluation and proudly obtained a four-star EFQM certificate. The guidance and recommendations we received are already being implemented and will help continue to improve the business and support level activities we do.

There were many other things 2021 brought to us, from distinguished guests to new international and national projects, high-quality publications and patents. But I would especially like to emphasize our collaboration with industry. We more than doubled our direct industrial collaborations, both in Slovenia and abroad. With this, our knowledge goes beyond the academic environment and has a direct impact on the development of renewable materials applications in the built environment.

I would conclude that I was extremely proud to hear that InnoRenew CoE was cited as an example of excellence during Nobel Week in an exclusive interview with Mariya Gabriel, European Commissioner for Innovation, Research, Culture, Education and Youth. The hard work and dedication of InnoRenew CoE's team towards excellence have been recognized within the highest levels of discussion in Europe. We will further work towards the United Nations' Sustainable Development Goals, and contribute to the ambitious targets set by the European Union. Taken together, this will set the basis to upgrade InnoRenew CoE's knowledge transfer activities in 2022 and beyond.

Enjoy reading about InnoRenew CoE's activities and achievements in 2021!

Ob pisanju predgovora je prva misel, ki mi pride na pamet, »DA, InnoRenew CoE se seli pod eno streho, v največjo leseno stavbo v Sloveniji!«

Naša nova stavba ni samo stavba – je tudi demonstracija našega znanja in raziskovalni projekt, ki nam bo pomagal pri ustvarjanju novega znanja in prispeval k nadaljnjem razvoju grajenega okolja.

Selitev v našo novo stavbo je tako pomembna tudi zato, ker je sodelovanje ključ za znanstvene preboje, ki bodo družbi pomagali premagati podnebno krizo. Stavba pa nam ne bo olajšala le sodelovanja ampak omogočila tudi povečanje naše prisotnosti v mednarodnih mrežah. Vzpostavili smo že neformalno mednarodno mrežo, povezano s projekti spremljanja stanja konstrukcij in inovativnih leseni stavbah. Združili smo se z univerzo Oregon State University, Univerzo na Primorskem in Univerzo v Helsinkih. Znotraj te mreže lahko uporabimo znanja s številnih strokovnih področij našega inštituta in tako pokažemo vrednost interdisciplinarno znanosti na področju grajenega okolja. Neposredno bomo seznanjeni s podatki o nekaterih edinstvenih in inovativnih konstrukcijskih sistemih, s čimer bomo lahko razvili znanje in orodja za njihovo primerjavo, kar bomo lahko uporabili tudi za primerjavo z ostalimi projektmi. Z namenom soustvarjanja zelene prihodnosti smo postali partnerji pobude Evropske komisije Novi evropski Bauhaus ter povezali raziskovalce in strokovnjake iz več kot 30 držav v novi akciji COST CA20139 – Holistični dizajn visokih leseni zgradb.

Zavedamo se, da je dobro upravljanje organizacije pomembno za uspešno znanstveno in ostalo delo. Zato smo se leta 2021 prijavili na ocenjevanje Evropske fundacije za upravljanje kakovosti (EFQM) in s ponosom pridobili certifikat EFQM s štirimi zvezdicami. Navodila in priporočila, ki smo jih prejeli, že izvajamo. Pomagala nam bodo pri nadalnjem izboljševanju naše poslovne in podporne dejavnosti.

Leto 2021 nam je prineslo še mnogo drugi stvari, od uglednih gostov, do novih mednarodnih in nacionalnih projektov, kakovostnih publikacij in patentov. Še posebej pa bi poudarila naše sodelovanje z industrijo. Neposredno sodelovanje z industrijskimi partnerji v Sloveniji in drugod smo več kot podvojili. S tem naše znanje širimo onkraj akademskega okolja in dejavno vplivamo na razvoj uporabe obnovljivih materialov v grajenem okolju.

Zaključila bi s tem, da sem bila izredno ponosna, ko sem slišala, da je bil InnoRenew CoE omenjen kot primer odličnosti v ekskluzivnem intervjuju z Marijo Gabriel, Evropsko komisarko za inovacije, raziskave, kulturo, izobraževanje in mladino na Nobelovem tednu. Trdo delo in predanost ekipe InnoRenew CoE odličnosti je bilo prepoznano tudi pri pogovorih na visoki ravni v Evropi. Še naprej si bomo prizadevali, da bomo z našim delom prispevali k ciljem trajnostnega razvoja Združenih narodov in prispevali k ambicioznim ciljem, ki si jih je zastavila Evropska unija. Z vsem naštetim bomo postavili osnovo za nadgradnjo dejavnosti prenosa znanja InnoRenew CoE v letu 2022 in kasneje.

Želim vam prijetno branje o aktivnostih in dosežkih InnoRenew CoE v letu 2021!

Dr. Andreja Kutnar

Letno Poročilo 7

Foreword from the deputy director

2021 has been another year burdened with uncertainty. Upon reflection, it is hard to avoid the continued effect of the coronavirus and its global impact. However, I have been thinking about our situation — at InnoRenew CoE and as a society — in the context of sustainability. At InnoRenew CoE, sustainability is a deeply embedded concern — we focus research and innovation activities on providing it, measuring it and teaching about it. Sustainability is part of our identity and central to our continued success.

InnoRenew CoE's interdisciplinarity exists by design to address the intricacies of sustainable solutions. Our elected focus on renewable materials to improve the environmental impact of materials, products and buildings centers our work in the current (and, I suspect, future) political climate that has seen an urgent shift towards mitigating climate change. Yet, any solution will have broader impacts than simply reducing carbon emissions or any other indicator of environmental impact. The societal, individual and economic outcomes of these solutions are just as important as the environmental impact, and our expertise in these areas is growing.

The broad approach InnoRenew CoE takes to increasing sustainability is necessary; sustainability is complex, and it cannot be achieved simply by improving one element of a building or optimizing energy consumption. At InnoRenew CoE, we understand this complexity and use our expert work to address the many aspects of sustainability.

In 2021, we began working on new projects that take novel approaches to reduce the environmental impact of production, materials and building systems. We continued our work in these areas and others, like circularity, human health, energy efficient construction, building and material development and optimization, education, gender, aging, ICT solutions and impact assessment methods. We are fortunate to have excellent partners in industry and academia that complement our expertise and help deliver our research and innovation to society.

Finally, I must also consider InnoRenew CoE's sustainability as an institution. To continue doing our work, we must meet some standards of economic viability — we do that by applying for grants and seeking partnerships with businesses and the public sector. Choosing sustainability, buildings and renewable materials as core research areas has given us a relative sense of security in the available opportunities. Beyond opportunity, though, the expertise of our team and the quality of our work is what will ensure our sustainability — our ability to continue.

I'm confident the InnoRenew CoE team will continue to grow, continue to succeed and continue to surprise and inspire me with ingenuity, dedication and commitment to a better future for us all.

Predgovor namestnika direktorice

Leto 2021 je bilo še eno leto negotovosti. Ob pogledu nazaj se je težko izogniti nadaljujočim se učinkom koronavirusa po svetu. Kljub temu sem premišljeval o našem položaju – znotraj InnoRenew CoE in širše v družbi – v kontekstu trajnosti. Na InnoRenew CoE je trajnostnost globoko zasidrano prizadevanje – raziskovalne in inovacijske dejavnosti usmerjam v njen zagotavljanje, merjenje in poučevanje o njej. Trajnostnost je del naše identitete in je osrednjega pomena za naš nadaljnji uspeh.

Interdisciplinarnost InnoRenew CoE smo zasnovali z namenom, da se lahko posvetimo tudi podrobnostim trajnostnih rešitev. Naše zavestno osredotočenje na obnovljive materiale, s katerimi bi izboljšali vpliv materialov, izdelkov in stavb na okolje, umešča naše delo v sedanje (in domnevam, da tudi v prihodnje) politično ozračje, ki se vse bolj osredotoča na nujno ublažitev podnebnih sprememb. Zavedati pa se moramo, da bo imela vsaka rešitev širše učinke kot le zmanjšanje emisij ogljika ali katerega koli drugega kazalnika vpliva na okolje. Vplivi teh rešitev na družbo, posameznika in gospodarstvo so prav tako pomembni kot vplivi na okolje, naše strokovno znanje na teh področjih pa se povečuje.

Celoviti pristop, ki ga uporablja InnoRenew CoE pri povečevanju trajnostnosti, je nujen; trajnostnost je kompleksen koncept in je ni mogoče doseči zgolj z izboljšanjem enega sestavnih delov stavbe ali optimizacijo porabe energije v njej. V InnoRenew CoE razumemo to kompleksnost in si prizadavamo, da pri svojem strokovnem delu obravnavamo čim več vidikov trajnostnosti.

Leta 2021 smo pričeli z izvajanjem projektov, v katerih razvijamo izvirne pristope za zmanjševanje vpliva proizvodnje, materialov in stavbnih sistemov na okolje. Nadaljevali smo delo na teh in drugih področjih, kot so krožnost, človekovo zdravje, energijsko učinkovita gradnja, razvoj in optimizacija stavb in materialov, izobraževanje, problematika spolov, staranja, rešitve IKT in metode ocenjevanja učinka. Imamo srečo, da imamo odlične partnerje v industriji in akademski sferi, ki dopolnjujejo naše strokovno znanje ter pomagajo pri vpeljavi naših raziskav in inovacij v družbo.

Na koncu moram pogledati tudi na trajnostnost InnoRenew CoE kot institucije. Da bi lahko še naprej opravljali svoje delo, moramo izpolnjevati nekatere standarde gospodarske uspešnosti – to počnemo s pripravljanjem projektnih prijav ter iskanjem partnerstev s podjetji in javnim sektorjem. Izbera trajnosti, stavb in obnovljivih materialov kot osrednjih raziskovalnih področij nam je dala relativno dober občutek varnosti glede uspeha pri izkoriščanju priložnosti, ki so nam na voljo. Še bolj kot priložnosti pa je strokovno znanje naše ekipe in kakovost našega dela tisto, kar bo zagotovilo našo lastno trajnost in omogočilo nadaljevanje našega dela.

Prepričan sem, da bo ekipa InnoRenew CoE še naprej rastla, bo še naprej uspešna ter me še naprej presenečala in navdihovala z iznajdljivostjo, zavzetostjo in predanostjo boljši prihodnosti za vse nas.

Dr. Michael Burnard

Vision, mission, values

vision

InnoRenew CoE sees solutions to the climate crisis in the science of buildings and materials; however, many challenges remain: addressing sustainability in building construction, operation and use; optimizing renewable materials; understanding human patterns of behavior within the built environment; improving occupant well-being and enhancing social cohesion. Confronting these challenges through interdisciplinary science will allow us to construct a built environment that is sustainable, healthy and supports society's growing need for advanced building and renovation techniques. Success in this endeavor will be built upon the InnoRenew CoE foundation of scientific work, creativity, innovation, industry cooperation and societal engagement. Our vision is to be both a world leader in the interdisciplinary science of the built environment and a model for international research excellence, industrial collaboration and public engagement.

Mission

InnoRenew CoE's mission is to advance the state of the art and achieve scientific and innovation excellence through interdisciplinary science, especially in our two key research areas: wood modification and restorative environmental and ergonomic design (REED).

Values

Inclusion and diversity: We build on our inclusion and diversity to enable personal development, creativity and realization of ideas.

Sustainability: We believe that preservation of nature, environmental stewardship and sustainable development will advance human- and nature-friendly economic and social progress.

Integrity: We have personal integrity and integrity in our actions to ensure respect and dignity within our institute and with our partners, collaborators and communities.

Pursuit of excellence: We pursue excellence in all areas — science, industry and community — to bring innovative solutions that address global issues of renewability and sustainability.

Open science: We are committed to open science and engage in the free global exchange of knowledge through open access and dissemination of our research and results.

Annual Report

Vizija

InnoRenew CoE vidi rešitve za podnebno krizo v znanosti, ki se posveča stavbam in materialom, kljub temu pa številni izzivi ostajajo: upoštevanje vidika trajnostnosti pri gradnji, obratovanju in uporabi stavb; optimiziranje obnovljivih materialov; razumevanje človeških vzorcev vedenja v okviru grajenega okolja; izboljšanje počutja prebivalcev in povečanje družbene kohezije. Obravnavanje teh izzivov na podlagi interdisciplinarne znanosti nam bo omogočilo ustvariti trajnostno in zdravo grajeno okolje, ki bo upoštevalo tudi naraščajoče potrebe družbe po naprednih tehnikah za obnovo in gradnjo. Uspeh teh prizadevanj se bo gradil na temelju znanstvenega dela v InnoRenew CoE, kreativnosti, inovativnosti, sodelovanja z industrijo in vključevanja družbe. Naša vizija je, da na področju interdisciplinarne znanosti, ki obravnava grajeno okolje, postanemo vodilna ustanova na svetu in zgled odličnosti za mednarodno raziskovanje, sodelovanje z gospodarstvom in vključevanje javnosti.

Poslanstvo

Poslanstvo InnoRenew CoE je nadgrajevanje najsodobnejših znanstvenih in gospodarskih izsledkov z interdisciplinarnimi raziskavami ter prizadevanje za znanstveno in inovacijsko odličnost, in to še posebej na dveh osrednjih področjih našega raziskovanja: pri modifikaciji lesa in pri restorativnem okoljskem in ergonomskem oblikovanju (REED).

Vrednote

Vključenost in raznovrstnost: Gradimo na vključenosti in raznovrstnosti, kar nam omogoča osebnosti razvoj, ustvarjalnost in uresničevanje idej.

Trajnostnost: Verjamemo, da bodo ohranjanje narave, upravljanje z okoljem in trajnostni razvoj spodbudili človeku in naravi prijazen gospodarski in družbeni napredek.

Integriteta: Skrbimo za osebno integriteto in integriteto pri delovanju, da zagotovimo spoštovanje in dostenjanstvo na lastnem inštitutu in v odnosu do naših partnerjev, sodelavcev ter skupnosti.

Prizadevanje za odličnost: Na vseh področjih – v znanosti, industriji in skupnosti – si prizadavamo za odličnost, da bi k svetovni problematiki obnovljivosti in trajnostnosti prispevali inovativne rešitve.

Odprta znanost: Zavezani smo odprti znanosti in vključevanju v brezplačno globalno izmenjavo znanja, k čemur prispevamo z odprtostopnimi objavami in razširjanjem naših raziskav in rezultatov.

Organizational structure

The Renewable Materials and Healthy Environments Research and Innovation Centre of Excellence (InnoRenew CoE) was established on 15 February 2017 according to Article 2 provisions from the Institutes Act of Slovenia (Ur. L. RS 12/91, 8/96, 36/00 and 127/06) and the Contract of Establishment of the InnoRenew CoE Renewable Materials and Healthy Environments Research and Innovation Centre of Excellence dated 29 November 2016. InnoRenew CoE is a not-for-profit private institute (in Slovenian legislation, "neprofitni zasebni zavod").

InnoRenew CoE's organizational structure consists of the Assembly of Founders, Executive Board, Director and Council of Experts. Living Laboratory InnoRenew is an integrated organizational unit.

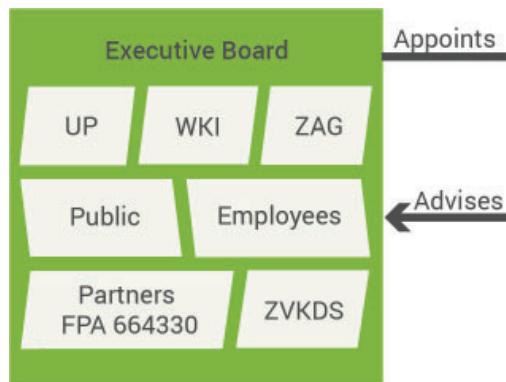

Assembly of Founders

University of Primorska
45.1% of the institute's capital
Fraunhofer Institute for Wood Research, Wilhelm-Klauditz-Institut WKI
24.9% of the institute's capital
Institute for the Protection of Cultural Heritage of Slovenia
15% of the institute's capital
Slovenian National Building and Civil Engineering Institute
15% of the institute's capital

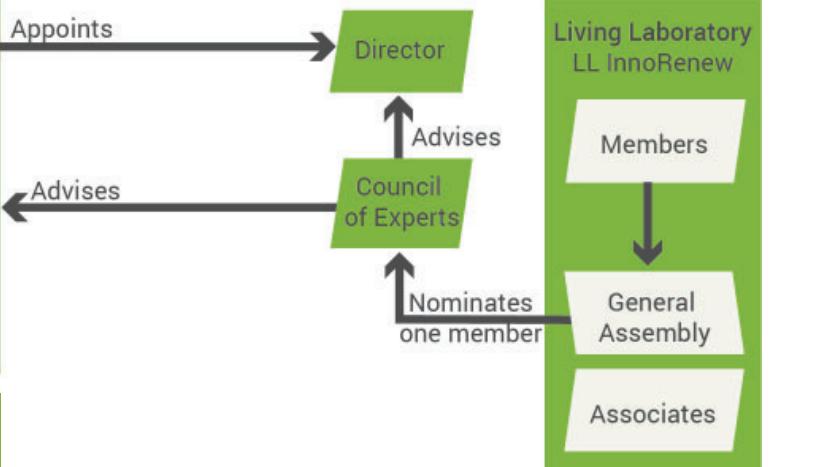

Executive Board

Prof. Dragan Marušič, Ph.D.; University of Primorska Founder representative and Chair
Prof. Klavdija Kutnar, Ph.D.; University of Primorska Founder representative
Prof. Bohumil Kasal, Ph.D.; Fraunhofer WKI Founder representative and Vice-chair
Boris Deanovič, M.Sc.; Institute for the Protection of Cultural Heritage of Slovenia Founder representative
Assoc. Prof. Andraž Legat, Ph.D.; Slovenian National Building and Civil Engineering Institute Founder representative
Mateja Mešl, M.Sc.; Pulp and Paper Institute Partner representative
Matej Gojčič; Regional Development Agency of the Ljubljana Urban Region Partner representative
Amy Noel Simmons, M.Sc.; InnoRenew CoE Employee representative
Karolina Schlegel; Republic of Slovenia Ministry of Education, Science and Sport Public representative

Annual Report

InnoRenew CoE Private Nonprofit Research Institute

InnoRenew CoE Center odličnosti za raziskave in inovacije na področju obnovljivih materialov in zdravega bivanjskega okolja (InnoRenew CoE) je bil ustanovljen 15. 2. 2017 na podlagi določil 2. člena Zakona o zavodih (Uradni list RS, št. 12/91, 8/96, 36/00 in 127/06) in pogodbe o ustanovitvi InnoRenew CoE Centra odličnosti za raziskave in inovacije na področju obnovljivih materialov in zdravega bivanjskega okolja, z dne 29. novembra 2016. InnoRenew CoE je neprofitni zasebni zavod.

Organizacijsko strukturo InnoRenew CoE sestavljajo skupščina ustanoviteljev, svet zavoda, direktorica in strokovni svet. Zavod ima tudi integrirano organizacijsko enoto Živi laboratorij InnoRenew.

Ustanovitelji zavoda

Univerza na Primorskem / Università del Litorale
45,1 % kapitala zavoda
Inštitut Fraunhofer Wilhelm-Klauditz (Fraunhofer WKI)
24,9 % kapitala zavoda
Javni zavod Republike Slovenije za varstvo kulturne dediščine
15 % kapitala zavoda
Zavod za gradbeništvo Slovenije
15 % kapitala zavoda

Svet zavoda

Prof. dr. Dragan Marušič; Univerza na Primorskem Predstavnik ustanoviteljev in predsednik
Prof. dr. Klavdija Kutnar; Univerza na Primorskem Predstavnica ustanoviteljev
Prof. dr. Bohumil Kasal; Fraunhofer WKI Predstavnik ustanoviteljev in podpredsednik
Mag. Boris Deanovič; Javni zavod Republike Slovenije za varstvo kulturne dediščine Predstavnik ustanoviteljev
Izr. prof. dr. Andraž Legat; Zavod za gradbeništvo Slovenije Predstavnik ustanoviteljev
Mag. Mateja Mešl; Inštitut za celulozo in papir Predstavnica partnerjev
Matej Gojčič; Regionalna razvojna agencija Ljubljanske urbane regije Predstavnik partnerjev
Mag. Amy Noel Simmons; InnoRenew CoE Predstavnica zaposlenih
Karolina Schlegel; Ministrstvo za izobraževanje, znanost in šport Republike Slovenije Predstavnica javnosti

Employees

InnoRenew CoE welcomed four new employees in 2021, two scientists, one support and business development expert and one technician, which brought the institute's total to 74 employees (55 scientists, 14 support and business development experts and five technicians). InnoRenew CoE employees come from 19 countries, including Belgium, Bosnia and Herzegovina, China, Croatia, the Czech Republic, Finland, France, Hungary, India, Italy, Norway, Pakistan, Poland, Slovenia, Spain, Sweden, Thailand, Tunisia and the United States.

Research

InnoRenew CoE employs 55 researchers and assistant researchers, 47 of whom work within one of the institute's five research groups. The eight researchers and assistant researchers who work outside of a research group cover the fields of analytical chemistry, biotechnological wood modification, statistics, education, innovation management, international collaboration and science communication.

Each group covers its own field and is also interconnected across the institution.

Research groups

Human Health in the Built Environment / Človekovo zdravje v grajenem okolju

Human Health in the Built Environment group; main areas of activity: wood science, biopsychology, psychogeriatrics, psychology, kinesiology, green building certification, neurophysiology and data analytics. Dr. Nejc Šarabon is the group leader.

Človekovo zdravje v grajenem okolju; področja delovanja: znanost o lesu, biopsihologija, psihogeriatrija, psihologija, kineziologija, certificiranje zelenih gradenj, nevrofiziologija in analiza podatkov. Vodja skupine je dr. Nejc Šarabon.

Inštitut zaposluje 55 raziskovalcev in raziskovalnih asistentov, od teh jih je 47 vključenih v raziskovalne skupine, osem pa jih deluje zunaj njih. Ti raziskovalci in raziskovalni asistenti pokrivajo različna področja, od analitične kemije in biotehnoloških postopkov modifikacije lesa prek statistike in šolskega izobraževanja do menedžmenta inovacij, mednarodnega sodelovanja in komuniciranja znanosti.

Ob ustanovitvi inštituta InnoRenew CoE leta 2017 je bilo zasnovanih pet raziskovalnih skupin.

Raziskovalne skupine

Wood Modification / Modificacija lesa

Wood Modification group; main areas of activity: wood science and technology, chemistry, physics, material science and lifelong learning. Dr. Anna Sandak is the group leader.

Modificacija lesa; področja delovanja: znanost o lesu in tehnologija lesa, kemija, fizika, znanost o materialih in vseživljenjsko učenje. Vodja skupine je dr. Anna Sandak.

Renewable Materials Composites / Kompoziti iz obnovljivih materialov

Renewable Materials Composites group; main areas of activity: bio-based composites, wood mechanics, nondestructive evaluation, material characterization and adhesion of materials. Dr. David B. DeVallance is the group leader.

Kompoziti iz obnovljivih materialov; področja delovanja: kompoziti, narejeni na osnovi biotskih materialov, mehanika lesa, neporušno vrednotenje, karakterizacija materialov in njihove adhezivnosti. Vodja skupine je dr. David B. DeVallance.

ICT in Renewable Materials and Sustainable Building /

Informacijske in računalniške tehnologije na področju obnovljivih materialov in trajnostne gradnje

ICT in Renewable Materials and Sustainable Building group; main areas of activity: information and communication technologies, information engineering and applied mathematics. Dr. Miklós Krész is the group leader.

Research projects

In 2021, InnoRenew CoE carried out 43 projects, five of which were under InnoRenew CoE's coordination. The Slovenian Research Agency (ARRS) financed 28 of these projects: eight basic, one postdoctoral and 19 bilateral projects (four with the United States, two with Austria, two with Bosnia and Herzegovina, two with Hungary, two with Norway, one with Denmark, one with Estonia, one with Finland, one with France, one with Italy, one with Lithuania and one with Turkey).

InnoRenew CoE also achieved a targeted research project co-financed by ARRS and Slovenia's Ministry of Economic Development and Technology (MGRT). In addition, one project was financed by the European Regional Development Fund and the Republic of Slovenia's Ministry of Education, Science and Sport; one project was funded by the Republic of Slovenia's Ministry of Agriculture, Forestry and Food and one project was funded by the Republic of Slovenia's Ministry of Education, Science and Sport.

InnoRenew CoE had three projects funded by the European Union-Horizon 2020, Marie Skłodowska-Curie Actions Individual Fellowships; two projects funded by the European Union-Erasmus+; two projects funded by the European Union-ForestValue and four projects funded by the European Union-Horizon 2020.

In October 2021, InnoRenew CoE became the coordinator of COST Action CA20139 – Holistic Design of Taller Timber Buildings.

All projects acquired by InnoRenew CoE in 2021 are presented below, and the table that follows lists all the institute's continuing projects.

Sustainable Building with Renewable Materials /

Trajnostna gradnja z obnovljivimi materiali

Sustainable Building with Renewable Materials group; main areas of activity: architectural and engineering design and consulting on larger timber buildings, diverse life cycle assessments, complex acoustic engineering and cultural heritage. Dr. Iztok Šušteršič is the group leader.

Trajnostna gradnja z obnovljivimi materiali; področja delovanja: arhitekturno ter inženirsko projektiranje in svetovanje pri večjih leseni stavbah, analiza življenjskega cikla (LCA), akustično projektiranje in kulturna dediščina. Vodja skupine je dr. Iztok Šušteršič.

Raziskovalni projekti

V letu 2021 je InnoRenew CoE izvajal 43 projektov (pet kot koordinator), od tega jih 28 financira Javna agencija za raziskovalno dejavnost RS (ARRS), in sicer osem temeljnih projektov, en podoktorski projekt in 19 bilateralnih projektov (štiri z ZDA, po dva z Avstrijo, Madžarsko, Bosno in Hercegovino ter Norveško in po enega z Italijo, Turčijo, Estonijo, Dansko, Litvo, Francijo in Finsko).

Poleg tega je InnoRenew CoE v letu 2021 dobil ciljno raziskovalni projekt, ki ga sofinancirata ARRS in Ministrstvo za gospodarski razvoj in tehnologijo (MGRT). Izvajali so tudi projekt, ki ga finančirata Evropski sklad za regionalni razvoj in Ministrstvo za izobraževanje, znanost in šport RS (MIZŠ), projekt, ki ga finančira Ministrstvo za kmetijstvo, gozdarstvo in prehrano Republike Slovenije (MKGP) in projekt, ki ga finančira Ministrstvo za izobraževanje, znanost in šport RS (MIZŠ).

V InnoRenew CoE so izvajali še tri projekte financirane iz programa MSCA - Marie Skłodowska-Curie Individual Fellowships (program Obzorja 2020), dva projekta financirana iz programa Erasmus+, dva projekta financirana iz programa ForestValue in štiri projekte financirane iz programa Obzorje 2020.

V oktobru 2021 je InnoRenew CoE postal tudi koordinator akcije COST CA20139 – Holistični dizajn visokih leseni zgradb.

V nadaljevanju so predstavljeni vsi projekti, pridobljeni v letu 2021, v tabeli pa še projekti, katerih aktivnosti so potekale tudi letos, a so bili pridobljeni v prejšnjih letih.

Economic, environmental and social aspects of wood processing and its use and carbon sequestration

PROJECT LEADER: Balázs Dávid, PhD

PERIOD: 01.09.2021 – 28.02.2023

FINANCING: Slovenian Research Agency (ARRS)

PARTNERS: InnoRenew CoE (Slovenia);
Slovenian Forestry Institute (Slovenia);
Pulp and Paper Institute (Slovenia)

Wood from sustainably managed forests is a renewable source of material and energy that stores carbon over its lifetime while consuming significantly fewer fossil resources in its extraction and processing than other materials. Slovenia is a leader in softwood industrial timber production and a strong net exporter of unprocessed roundwood. The processing chains are not optimized, and there are opportunities to improve Slovenia's position in several areas, with concomitant loss of full information on economic, environmental, and social performance. In this project, researchers will upgrade the system and develop a model that will allow multi-criteria optimization of timber volumes for processing across the entire forestry, wood and paper sector for a long-term policy that is coordinated with the widest range of stakeholders. The model will be based on development needs, businesses, and investment plans of various stakeholders, with a holistic evaluation of different scenarios for the development of wood extraction, processing and use in Slovenia.

InnoRenew CoE project activities: InnoRenew CoE will prepare a report outlining the results of an LCA on wood products compared to non-wood products, a simulation model for wood redistribution in the wood processing industry and a description of optimal wood utilization scenarios with environmental impacts. Further, researchers will prepare results of the optimized wood redistribution model in the wood processing industry.

Ekonomski, okoljski in družbeni vidiki predelave in rabe lesa in v njem vezanega ogljika

VODJA PROJEKTA: dr. Balázs Dávid

TRAJANJE: 1. 9. 2021 – 28. 2. 2023

FINANCIRANJE: ARRS

PARTNERJI: InnoRenew CoE (Slovenija);
Gozdarski inštitut Slovenije (Slovenija);
Inštitut za celulozo in papir (Slovenija)

Les, pridobljen iz trajnostno gospodarjenih gozdov, je obnovljiv vir materiala in energije, ki v življenjski dobi v sebi skladišči ogljik, hkrati pa pri pridobivanju in predelavi porabimo bistveno manj fosilnih virov kot pri drugih materialih. V Sloveniji prevladuje proizvodnja industrijskega lesa iglavcev, smo izrazit neto izvoznik nepredelanega okroglega lesa, pri proizvodnji okroglega lesa iglavcev prevladuje skupina hlodov za žago in furnir, pri listavcih pa les za kurjavo. V Sloveniji so predelovalne verige neoptimizirane, s čimer izgubljamo številne priložnosti za izboljšanje položaja na več področjih, hkrati pa zaradi izgube ključnih podatkov o tokovih lesa in proizvodnih procesih izgubljamo polne informacije o ekonomskeh, okoljskih in družbenih rezultatih. Predlagani projekt bo sistem nadgradil in pripravil model, ki bo omogočil večkriterijsko optimizacijo količin lesa za predelavo v celotnem sektorju gozdarstva, lesarstva in papirništva (GLP) ter s tem pripomogel k dolgoročni in z najširšim krogom deležnikov usklajeno politiko. Model bo temeljil na razvojnih potrebah, poslovnih in investicijskih načrtih različnih deležnikov ter bo omogočal celostno ovrednotenje različnih scenarijev razvoja pridobivanja, predelave in rabe lesa v Sloveniji.

Glavne aktivnosti InnoRenew CoE na projektu: InnoRenew CoE bo pripravil poročilo z rezultati analize LCA lesnih proizvodov v primerjavi z ostalimi, model za prerazporejanje lesa v lesnopredelovalni industriji, opis scenarijev optimalne rabe lesa ter pripravil rezultate optimiziranega modela prerazporejanje lesa v lesnopredelovalni industriji.

Development of multi-objective optimisation algorithms for the design of buildings

PROJECT LEADER: Balázs Dávid, PhD

PERIOD: 01.03.2021 – 28.02.2023

FINANCING: Slovenian Research Agency (ARRS)

PARTNERS: InnoRenew CoE (Slovenia),
University of Pécs (Hungary)

Razvoj algoritmov večparametrske optimizacije za načrtovanje večnamenskih stavb

VODJA PROJEKTA: dr. Balázs Dávid

TRAJANJE: 1. 3. 2021 – 28. 2. 2023

FINANCIRANJE: ARRS

PARTNERJI: InnoRenew CoE (Slovenija),
Univerza v Pécsu (University of Pécs) (Madžarska)

The goal of this cooperation is the development of a multi-objective optimisation tool that considers optimisation questions simultaneously and provides multiple good-quality solution options with different possible trade-offs between these objectives. This tool will integrate mathematical modelling, combinatorial optimisation and artificial intelligence (AI) techniques in order to advance the ED method, ensuring de facto optimal buildings, performing at the highest energy efficiency and comfort level. Structural design procedures will be analysed for buildings of various types and uses, and a common group of crucial optimisation questions will be identified as a result. As these underlying optimisation problems are NP-hard, even independently, the integrated tool will most likely rely heavily on heuristics and metaheuristics to obtain good-quality approximate solutions. The efficiency of the developed tool will be tested both on artificial instance sets and real-life use-cases.

InnoRenew CoE project activities: InnoRenew CoE will develop the multi-objective optimisation tool, which will include both the mathematical modelling of the arising optimisation problems and development of efficient solution methods (applying AI and combinatorial optimisation) for them. InnoRenew CoE will also implement a simulation environment for testing and validation of the developed tool.

Namen tega projekta je razvoj večparametrskega optimizacijskega orodja, ki sočasno zajema različne optimizacijske izzive in rešitev zagotavlja z različnimi kompromisi med optimizacijskimi parametri. Orodje bo združevalo matematično modeliranje, kombinacijsko optimizacijo in umetno inteligenco, namenjeno napredku pri metodi ED, ki bo zagotovljal dejansko optimalno zgradbo z največjo energetsko učinkovitostjo. Postopki projektiranja konstrukcij bodo analizirani za zgradbe različnih tipov in namenov, kot rezultat pa bodo opredeljena ključna optimizacijska vprašanja. Kersoposamezni optimizacijski problemi v ozadju že sami po sebi NP-težki, bo razvito orodje najverjetneje temeljilo na hevrističnih in metahevrističnih pristopih za iskanje približnih rešitev zadostne kvalitete. Učinkovitost razvitih orodij bo tudi testirana tako na generiranih kot na dejanskih primerih projektiranja v praksi.

Glavne dejavnosti InnoRenew CoE pri projektu: V InnoRenew CoE bodo razvili večparametrska optimizacijska orodja, ki zajemajo matematično modeliranje, reševanje optimizacijskih problemov in razvoj rešitev ob uporabi umetne inteligence in kombinacijske optimizacije. Implementirali bodo tudi simulacijsko okolje za testiranje in validacijo razvitih orodij.

Modified lignin nanoparticles for composite and bio-based/Cu packaging applications (PACK-NIN)

PROJECT LEADER: Esakkiammal Sudha Esakkimuthu, PhD

PROJECT SUPERVISOR: David B. DeVallance, PhD

PERIOD: 01.04.2021 – 31.03.2023

FINANCING: EU, Horizon 2020-H2020-MSCA-IF-2020 Marie Skłodowska-Curie Individual Fellowship (Standard European Fellowships)

PROJECT COORDINATOR: InnoRenew CoE (Slovenia)

Polymer consumption is increasing in end-user industries such as packaging, household appliances, construction and automobiles. Comparing different applications, packaging alone accounts for nearly 42% of total polymer consumption. Polymers used in packaging has risen from 5 million tons to 100 million tons within the past 60 years. The number of polymers used in food packaging is especially noticeable due to convenience over traditional single-component glass and metal packaging. Polylactic acid (PLA) is among the most widely used polymers in plastic films, bottles and biodegradable medical devices. However, PLA exhibits some limitations—slow crystallization, poor thermal stability, low tensile strength upon water absorbance and high cost. PLA's physicochemical properties can be overcome via incorporation with different polymers, like biomass-based polymer (lignin) that has shown much potential. Lignin has been used as a filler with PLA to enhance thermal stability, UV properties and tensile strength. PACK-NIN will focus on incorporating Cu/lignin nanoparticle into the PLA matrix to enhance compatibility, bonding interaction and evaluate the antimicrobial activity of the synthesized composites. PACK-NIN proposes to develop a sustainable bio-nanocomposite that provides breakthroughs for advancing lignin use in food packaging and other composite applications.

InnoRenew CoE project activities: This is a Marie Skłodowska-Curie Individual Fellowship awarded to Dr Esakkiammal Sudha Esakkimuthu to carry out the PACK-NIN project under the mentorship of Dr David DeVallance within InnoRenew CoE's Renewable Materials Composites research group. In addition to her scientific contributions, Dr Esakkimuthu will mentor young researchers, organize events and manage projects.

Modificirani nanodelci lignina za uporabo v kompozitnih embalažah na biološki osnovi (PACK-NIN)

VODJA PROJEKTA: dr. Esakkiammal Sudha Esakkimuthu

MENTOR PROJEKTA: dr. David B. DeVallance

TRAJANJE: 1. 4. 2021 – 31. 3. 2023

FINANCIRANJE: EU, Obzorje 2020 – H2020-MSCA-IF-2020 Marie Skłodowska-Curie Individual Fellowship (Standard European Fellowships)

KOORDINATOR PROJEKTA: InnoRenew CoE (Slovenija)

Uporaba polimerov se v industriji končnih izdelkov, kot so embalaža, gospodinjski aparati, gradbeništvo in avtomobili, vse bolj povečuje. Primerjava različnih uporab polimerov kaže, da samo embalaža predstavlja skoraj 42 odstotkov celotne porabe. Polimeri, uporabljeni v embalaži, so se v zadnjih 60 letih povečali s pet na sto milijonov ton. Še posebej opazno je število polimerov, uporabljenih v živilski embalaži, kar lahko pripišemo njihovi cenovni ugodnosti v primerjavi s tradicionalno enokomponentno stekleno in kovinsko embalažo. Najpogosteje se uporablja polietilen, polipropilen in – predvsem za plastične folije, steklenice in biološko razgradljive medicinske pripomočke – polilaktična kislina (PLA). Vendar ima PLA nekatere slabosti, kot so počasna kristalizacija, slaba topotna stabilnost, izguba natezne trdnosti zaradi absorpcije vode in visoki stroški. Fizikalno-kemijske lastnosti PLA je mogoče izboljšati z vključevanjem različnih polimerov, kakršen je tudi polimer na osnovi biomasse (lignin), ki izkazuje veliko zmogljivost. Lignin se uporablja s PLA kot polnilo za povečanje topotne stabilnosti, UV-lastnosti in natezne trdnosti. Pri projektu PACK-NIN se bodo posvetili vključevanju nanodelcev Cu/lignin v matriko PLA, da bi povečali združljivost in medsebojne vezi ter ovrednotili protimikrobnе aktivnosti sintetiziranih kompozitov. Pri tem načrtujejo razvoj trajnostnega bionanokompozita, ki bo zagotovil večjo uporabo lignina v živilski embalaži in drugih kompozitnih uporabah.

Glavne dejavnosti InnoRenew CoE pri projektu: Projekt je pridobila dr. Esakkiammal Sudha Esakkimuthu na razpisu Marie Skłodowska-Curie Individual Fellowship, izvajala pa ga pod mentorstvom dr. Davida DeVallancea v okviru raziskovalne skupine Kompoziti iz obnovljivih materialov v InnoRenew CoE. Ob znanstvenem delu bo dr. Esakkimuthu tudi mentorirala mlade raziskovalce, organizirala dogodke in vodila projekte.

Green synthesis of sustainable BIO-sourced multi-functional ingredient for skin CARE applications (BIO4CARE)

PROJECT LEADER: Oihana Gordobil, PhD

PROJECT SUPERVISOR: Anna Sandak, PhD

PERIOD: 01.05.2021 – 30.04.2023

FINANCING: EU, Horizon 2020-H2020-MSCA-IF-2020 Marie Skłodowska-Curie Individual Fellowship (Standard European Fellowships)

PROJECT COORDINATOR: InnoRenew CoE (Slovenia)

The personal care and cosmetics market is driven by skin care products that are designed for beautifying, preventing skin from imperfections and protecting skin against the damaging effect of UV rays. Skin care formulations have water and oil as the main components in addition to other chemical functional ingredients.

Regular use of skin care products results in chemical compounds continuously being released into the environment, which poses a serious threat to ecosystems and human health. Current social awareness and demand for cosmetic products based on natural ingredients is forcing the industry and scientific community to search for safe and sustainable solutions. To that end, research on lignin polymer's diverse intrinsic functional and bioactive properties has led to increased interest in this bio-sourced compound for skin care applications. BIO4CARE tackles challenging concepts with innovative solutions to develop an efficient lignin-based multi-functional ingredient able to work as a surfactant, UV filter, antioxidant and preservative for cosmetics and health care products by utilizing the valorization of an undervalued kraft-pulping by-product.

InnoRenew CoE project activities: This is a Marie Skłodowska-Curie Individual Fellowship awarded to Dr Oihana Gordobil to carry out the BIO4CARE project under the mentorship of Dr Anna Sandak within InnoRenew CoE's Wood Modification research group. In addition to her scientific contributions, Dr Gordobil will mentor young researchers, organize events and manage projects under BIO4CARE's umbrella at InnoRenew CoE.

Zelena sinteza trajnostne večnamenske biosestavine za nego kože (BIO4CARE)

VODJA PROJEKTA: dr. Oihana Gordobil

MENTORICA PROJEKTA: dr. Anna Sandak

TRAJANJE: 1. 5. 2021 – 30. 4. 2023

FINANCIRANJE: EU, Obzorje 2020 – H2020-MSCA-IF-2020 Marie Skłodowska-Curie Individual Fellowship (Standard European Fellowships)

KOORDINATOR PROJEKTA: InnoRenew CoE (Slovenija)

Na trgu za osebno nego in kozmetiko prevladujejo izdelki za nego kože, ki so namenjeni polepšanju, omilitvi pomanjkljivosti kože in zaščiti kože pred škodljivimi učinki UV-žarkov. Glavne sestavine formulacije za nego kože pogosto temelijo na vodi in olju. Poleg tega pa ti izdelki vsebujejo še kemične sestavine. Zaradi uporabe teh izdelkov se kemične spojine nenehno sproščajo v okolje, kar resno ogroža ekosisteme in zdravje ljudi. Trenutna družbena ozaveščenost in povpraševanje po kozmetičnih izdelkih na osnovi naravnih sestavin spodbujata industrijo in znanstveno skupnost k iskanju varnih in trajnostnih rešitev. Prav to je sprožilo tudi raziskave o funkcionalnih in bioaktivnih lastnostih polimera lignina, ki je pridobljen iz naravnih virov. BIO4CARE se z inovativnimi rešitvami ukvarja z zahtevnimi koncepti za razvoj učinkovite večnamenske sestavine na osnovi lignina, ki lahko deluje kot površinsko aktivna snov, UV-filter, antioksidant ter konzervans za kozmetiko in zdravstvene izdelke z uporabo valorizacije podcenjenega stranskega proizvoda sulfatne celuloze.

Glavne dejavnosti InnoRenew CoE pri projektu: To je projekt, ki ga je pridobila dr. Oihana Gordobil na razpisu Marie Skłodowska-Curie Individual, izvajala pa ga bo pod mentorstvom dr. Anne Sandak in v okviru raziskovalne skupine Modifikacija lesa v InnoRenew CoE. Ob znanstvenem delu bo dr. Oihana Gordobil tudi mentorirala mlade raziskovalce, organizirala dogodke in vodila projekte.

Optimization and fault forecasting in port logistics processes using artificial intelligence, process mining and operations research

PROJECT LEADER: Miklós Krész, PhD

PERIOD: 01.03.2021 – 28.02.2023

FINANCING: Slovenian Research Agency (ARRS)

PARTNERS: InnoRenew CoE (Slovenia); University of Pannonia, Faculty of Information Technology (Hungary)

Optimizacija in napovedovanje napak v pristaniških logističnih procesih z uporabo umetne inteligence, procesnega rudarjenja in operacijskih raziskav

VODJA PROJEKTA: dr. Miklós Krész

TRAJANJE: 1. 3. 2021 – 28. 2. 2023

FINANCIRANJE: ARRS

PARTNERJI: InnoRenew CoE (Slovenija), Fakulteta za informacijsko tehnologijo, Univerza v Panoniji (Műszaki Informatikai Kar, Pannon Egyetem) (Madžarska)

Appropriate resource allocation and logistics scheduling have an impact on both their cost and ecological footprint. However, despite well-scheduled logistics operations, a decrease in resource performance or a faulty resource may have severe consequences that can influence the precision of a distribution operation, the quality of the products to deliver, the number/cost of the required resources or the environmental impact of the process. Thus, decreasing probability and/or minimizing impact of a faulty resource on the schedule are important aspects of logistics planning. Traditional solutions in logistics apply methodologies of operations research (mathematical programming or heuristics) that provide access to efficient solution packages. However, the dynamically changing environment in port operations needs to adapt these dynamics in the models and methods. Smart logistics is based on data collection from sensors and IoT, a technology that is also available in port operations. Currently, automatic data processing and decision-making face new challenges that result in the emergence of new optimization problems on large data sets. The objective of this project is to develop smart optimization solutions for logistics in port operations. As expected, results aim to provide a novel approach for a unified framework to develop data-driven solutions for the optimization of port logistics problems through system modelling and analysis, mathematical and data science modelling and integration of operations research machine learning and process mining.

InnoRenew CoE project activities: InnoRenew CoE will identify and study problems in port logistics where smart solutions are possible for monitoring processes, developing system models and a decision support framework for the identified problems with respect to the integration of data analytics and optimization approaches, testing the solutions on real-world and simulated data sets and analyzing the results.

Na stroške in ekološki odtis virov pomembno vplivata njihova ustreznna razporeditev in načrtovanje logističnih procesov. A kljub dobro načrtovanim logističnim operacijam lahko resne posledice prineseta zmanjšana zmogljivost ali okvara virov. To namreč vpliva na natančnost distribucijskega postopka, kakovost izdelkov, ki jih je treba dostaviti, število/stroške potrebnih virov ali na okoljski vpliv procesa. Zmanjšanje verjetnosti okvare vira in/ali vpliva napak pri načrtovanju sta zato pomembna vidika logističnega načrtovanja. Tradicionalne rešitve v logistiki uporabljajo metodologijo operacijskega raziskovanja (matematično programiranje ali hevristika), ki vključuje dostop do bogate strokovne literature in prinaša učinkovite svežnje rešitev. Vendar pa mora dinamično spremenjajoče se okolje pri pristaniških dejavnostih to dinamiko prilagoditi tudi v modelih in metodah. Pametna logistika temelji na senzorjih za zbiranje podatkov in IoT, tehnologiji, ki je na voljo tudi pri pristaniških dejavnostih. Dandanes se samodejna obdelava podatkov in odločanje soočata z novimi izzivi, zaradi česar se pojavljajo novi problemi z optimizacijo velikih naborov podatkov. Cilj projekta je, da z integracijo strojnega učenja, rudarjenja procesov in operacijskega raziskovanja razvijemo pametne optimizacijske rešitve za logistiko v pristaniških dejavnostih.

Glavne dejavnosti InnoRenew CoE pri projektu: Naloge InnoRenew CoE bodo ugotavljanje in proučevanje tistih logističnih problemov pristanišč, pri katerih obstaja možnost vključevanja pametnih rešitev za spremljanje procesov, razvoj sistemskih modelov in okvirov za podporo pri odločitvah glede ugotovljenih težav, vezanih na vključevanje podatkovnih analitik in optimizacijskih pristopov, testiranje rešitev v živo in testiranje simuliranih podatkovnih nizov ter analiziranje rezultatov.

Olive leaf multi product cascade-based biorefinery: From an under-used biomass in the primary sector to tailor-made solutions for high added-value international market applications (OLEAF4VALUE)

PROJECT LEADER: Jakub Sandak, PhD

PERIOD: 01.07.2021 – 30.06.2024

FINANCING: EU, Horizon 2020 – Bio-based Industries

PROJECT COORDINATOR: Natac Biotech SL (Spain)

PARTNERS: Natac Biotech SL (Spain); Oleicola El Tejar Nuestra Señora de Araceli (Spain); Ingecor Agroforestal SL (Spain); InnoRenew CoE (Slovenia); Fundacion Cener (Spain); Instituto Politecnico de Bragança (Portugal); Biochemize SL (Spain); Universita degli studi di Firenze (Italy); Nizo Food Research BV (Netherlands); Martin-Luther-University Halle-Wittenberg (Germany); Havforskningsinstituttet (Norwegian Institute of Marine Research) (Norway); Mibelle AG (Switzerland); Eurizon SL (Spain); Zero Emissions Engineering BV (Netherlands); NNFCC Limited (United Kingdom); Mowi Feed AS (Norway)

OLEAF4VALUE is a three-year project that will develop a complete valorization system for the olive leaf. Globally, 4.5 million tons of olive leaves are produced annually by the olive oil industry, a key industry in southern Europe and along the Mediterranean coast. This recalcitrant biomass represents a problem for both farmers and the whole industry as it needs to be removed from the fields and olive oil mills. Currently, this biomass is burned, given to cattle or, in some cases, combusted to produce energy. OLEAF4VALUE will set up the basis for a smart value chain based on a newly developed 4.0 concept, Smart Dynamic Multi-Valorization-Route Biorefinery (SAMBIOS), for the cascade valorization of olive leaf biomass according to its physicochemical composition, particularly modulated by specific pretreatments to produce target products. Advanced green extraction and isolation technologies will be used to sequentially separate all valuable fractions and compounds with a zero-waste approach according to end-user market needs from high-value sectors: food, feed, health, cosmetics, pharma and chemicals.

InnoRenew CoE project activities: InnoRenew CoE will lead development and implementation of efficient, low-cost and portable sensors for olive leaf screening, development and validation of chemometric models that merge reference data with VIS-NIR spectra and development of a Biomass Suitability Index for olive leaves' physical and chemical properties. InnoRenew CoE will also conduct smart supply chain analysis for the investigated biomass and develop efficient optimization methods based on its identified unique characteristics.

Kaskadna biorefinerija izdelkov iz oljčnih listov: od neuporabljene biomase v primarnem sektorju do prilagojenih rešitev za uporabo na mednarodnem trgu z visoko dodano vrednostjo (OLEAF4VALUE)

VODJA PROJEKTA: dr. Jakub Sandak

TRAJANJE: 1. 7. 2021 – 30. 6. 2024

FINANCIRANJE: EU, Obzorje 2020 – Bio-Based Industries

KOORDINATOR PROJEKTA: Natac Biotech SL (Španija)

PARTNERJI: Natac Biotech SL (Španija); Oleicola El Tejar Nuestra Señora de Araceli (Španija); Ingecor Agroforestal SL (Španija); InnoRenew CoE (Slovenija); Fundacion Cener (Španija); Instituto Politecnico de Bragança (Portugalska); Biochemize SL (Španija); Universita degli studi di Firenze (Italija); Nizo Food Research BV (Nizozemska); Martin-Luther-University Halle-Wittenberg (Nemčija); Havforskningsinstituttet (Norwegian Institute of Marine Research) (Norveška); Mibelle AG (Švica); Eurizon SL (Španija); Zero Emissions Engineering BV (Nizozemska); NNFCC Limited (Združeno Kraljestvo); Mowi Feed AS (Norveška)

OLEAF4VALUE je triletni projekt, katerega namen je razviti celoten sistem valorizacije oljčnih listov. Industrija oljčnega olja – med pomembnejšimi so v Južni Evropi in ob sredozemski obali – letno proizvede 4,5 milijona oljčnih listov. Ta neuporabljena biomasa povzroča kmetom in celotni industriji oljčnega olja težave, saj jo morajo v postopku pridelave oljčnega olja odstraniti s polj in iz mlinov. Dandanes oljčne liste zažigajo na poljih, uporabljajo kot krmo za govedino, v nekaterih primerih pa sežigajo z namenom pridobivanja energije. Cilj projekta OLEAF4VALUE je vzpostavitev osnovne pametne vrednostne verige – ta temelji na konceptu 4.0: Smart Dynamic Multi-Valorization-Route Biorefinery (SAMBIOS) – za kaskadno valorizacijo oljčnih listov glede na njihovo fizikalno-kemijsko sestavo, posebej prirejeno s posebnimi predobdelavami za proizvodnjo ciljnih izdelkov. Napredne tehnologije za zeleno ekstrakcijo in izolacijo bodo uporabljeni za ločevanje vseh dragocenih frakcij in spojin s postopkom brez proizvajanja odpadkov (zero-waste) in na podlagi potreb trga končnih uporabnikov na področju pomembnih panog: živilske, krmne, zdravstvene, kozmetične, farmacevtske in kemične industrije.

Glavne dejavnosti InnoRenew CoE pri projektu: InnoRenew CoE bo zadolžen za razvoj in uporabo učinkovitih in nizkocenovnih prenosnih senzorjev za preiskovanje oljčnih listov, za razvoj in uporabo kemometričnih modelov, ki združujejo referenčne podatke s spektri VIS-NIR, ter za razvoj indeksa primernosti biomase (Biomass Suitability Index) za fizične in kemijske lastnosti oljčnih listov.

Reverse logistics network of residual wood biomass

PROJECT LEADER: Jakub Sandak, PhD

PERIOD: 01.12.2021 – 30.11.2024

FINANCING: Slovenian Research Agency (ARRS)

PROJECT COORDINATOR: Sieć Badawcza Łukasiewicz,
Institute of Logistics and Warehousing (Poland)

PARTNERS: InnoRenew CoE (Slovenia); Vienna University of Technology (Austria)

Povratna logistika biomase lesnih ostankov

VODJA PROJEKTA: dr. Jakub Sandak

TRAJANJE: 1. 12. 2021 – 30. 11. 2024

FINANCIRANJE: ARRS

KOORDINATOR PROJEKTA: Sieć Badawcza Łukasiewicz –
Institute of Logistics and Warehousing (Poljska)

PARTNERJI: InnoRenew CoE (Slovenija); Vienna University of Technology (Avstrija)

Optimization problems in the reverse logistics network of residual wood biomass will be modelled as the output of the project, and efficient solution methods will be implemented. As these models and methods will consider the multi-objective nature of these relevant optimization questions, they will have both an environmental and economic impact. Companies will be able to utilize them to decrease their environmental footprint (e.g., reduce the amount of resources sent for landfill or incineration, decrease the number of trucks used and distance traveled) as well as streamline their economic efficiency (e.g., optimize transportation routes, save inventory or truck space with efficient packing schemes). The developed methods will be tested in a simulation framework, which also has the potential to be expanded into a decision support system in the future. This will allow the simulation of various scenarios with different parameter set-ups and provide multiple good-quality suggestions to end-users for a given problem instance. Real-world and simulated information connected to the availability of residual wood biomass will also be collected through empirical studies. The study of this data will reveal unique characteristics and patterns that can be generalized for other biomass supply chains, making it easier to produce randomized realistic test instances for future research.

InnoRenew CoE project activities: InnoRenew InnoRenew CoE researchers will contribute to the analysis of the reverse wood value chain and identification of its most important optimization problems. They will also assist in development of mathematical models and exact algorithms for their solutions as well as implement a simulation environment where large-scale testing of both exact and approximate algorithms will be possible.

V okviru projekta bodo raziskovalci modelirali optimizacijske probleme povratne logistike ostankov lesne biomase in implementirali učinkovite metode za njihovo rešitev. Končni cilj projekta je razvoj modelov in metod, ki upoštevajo tako okoljski kot ekonomski vidik. Rezultati projekta bodo tako namenjeni zmanjševanju okoljskega odtisa (npr. zmanjšanju količine virov za sežig ali odlagališče, zmanjšanje števila uporabljenih tovornjakov in prevožene razdalje), kot tudi izboljšanju ekonomske učinkovitosti (npr. optimizacija prevoznih poti, uporaba učinkovitih pakirnih shem za prihranek prostora v tovornjaku ali skladišču). Razvite metode bodo intenzivno testirane v simuliranem okolju, z možnostjo nadaljnega razvoja v sistem za podporo odločjanju. Tak napreden sistem omogoča simulacijo različnih scenarijev na osnovi različnih nastavitev parametrov. Na osnovi empirične študije bodo zbrani podatki o razpoložljivosti ostankov lesne biomase, ki izvirajo tako iz primerov realnega sveta, kot tudi iz razvite simulacije. Preučevanje teh podatkov lahko razkrije edinstvene značilnosti in vzorce, ki jih je mogoče posložiti tudi na druge dobavne verige biomase, kar olajša razvoj realističnih testnih instanc za nadaljnje raziskave.

Glavne dejavnosti InnoRenew CoE pri projektu: InnoRenew CoE bo prispeval k analizi povratne verige vrednosti lesa in identifikaciji njenih najpomembnejših problemov optimizacije. Pomagal bo tudi pri razvoju matematičnih modelov in natančnih algoritmov za njihovo rešitev ter izvedbo simulacijskega okolja, kjer bo mogoče obsežno testiranje natančnih in približnih algoritmov.

PROJECT LEADER: Anna Sandak, PhD

PERIOD: 01.05.2022 – 30.04.2025

FINANCING: European Union – ForestValue Research Programme and Republic of Slovenia's Ministry of Education, Science and Sport

PROJECT COORDINATOR: University of Göttingen, Department of Wood Biology and Wood Products (Germany)

PARTNERS: Norwegian Institute of Wood Technology (Norway), Norwegian Institute of Bioeconomy Research (Norway), Tallinn University of Technology (Estonia), InnoRenew CoE (Slovenia), Lund University (Sweden), Miebach (Germany), ZRS Architekten (Germany), Holzbau Deutschland (Germany), Finnlog OÜ (Finland), Estonian Woodhouse Association (Estonia), Estonian Forest and Wood Industries Association (Estonia), TreFokus (Norway), Swedish Wood (Swedish), TMF (Swedish), Sweco Norge AS (Swedish), Norconsult Informasjonssystemer AS (Norway), Lumar IG (Slovenia)

WoodLCC will enable robust and precise life-cycle-costing (LCC) based on input from novel models for detailed service life performance specification for wooden components and buildings. The project has two hypotheses: 1) Improved service life input data will enable more precise and robust LCC for wood-based products, resulting in significantly improved economic and environmental impact, and 2) LCC will find common acceptance only if reliable input data are available and complemented with knowledge about user expectations. Therefore, a holistic approach will be used to integrate service life data in LCC analysis instruments. The outcome will be the WoodLCC data platform.

WoodLCC will use results from novel methods for detailed service life performance specification established through extensive past research on dose/response functions for exterior wood elements. WoodLCC's novelty is the optimization of the LCC input data for wood-based building products.

InnoRenew CoE project activities: InnoRenew CoE will deliver a demo plugin for BIM software for estimation of LCC that is adopted for the specific needs of timber structures. The service life simulation that is indispensable for reliable LCC analysis will be implemented at three levels of complexity. All levels will be objectively validated to determine the novel tool's reliability and assure compatibility with real-life cases, with the overall objective to achieve a realistic service life scenario (RSLS) for timber structures and elements.

Enhanced Life-Cycle-Costing in wood construction by novel methods for service life planning (WoodLCC)

Nove metode za načrtovanje življenjske dobe lesa v leseni gradnji z izboljšanim vrednotenjem stroškov življenjskega cikla (WoodLCC)

VODJA PROJEKTA: dr. Anna Sandak

TRAJANJE: 1. 5. 2022 – 30. 4. 2025

FINANCIRANJE: Evropska unija – ForestValue Research Programme in Ministrstvo za izobraževanje, znanost in šport Republike Slovenije

KOORDINATOR PROJEKTA: University of Göttingen, Department of Wood Biology and Wood Products (Nemčija)

PARTNERJI: Norwegian Institute of Wood Technology (Norveška), Norwegian Institute of Bioeconomy Research (Norveška), Tallinn University of Technology (Estonija), InnoRenew CoE (Slovenija), Lund University (Švedska), Miebach (Nemčija), ZRS Architekten (Nemčija), Holzbau Deutschland (Germany), Finnlog OÜ (Finska), Estonian Woodhouse Association (Estonija), Estonian Forest and Wood Industries Association (Estonija), TreFokus (Norveška), Swedish Wood (Švedska), TMF (Švedska), Sweco Norge AS (Švedska), Norconsult Informasjonssystemer AS (Norveška), Lumar IG (Slovenija)

Glavni cilj projekta WoodLCC je omogočiti zanesljivo in natančno računanje stroškov življenjskega cikla (Life-Cycle-Costing LCC) lesa na podlagi vhodnih podatkov. Podatki bodo izvzeti iz novih modelov za podrobno specifikacijo učinkovitosti življenjske dobe lesenih komponent in lesenih stavb. WoodLCC bo v celoti izkoristil rezultate novih metod za podrobno specifikacijo zmogljivosti lesa skozi njegovo življenjsko dobo. Omenjene metode so bile vzpostavljene z obsežnimi raziskavami o odnosu med dozo in odzivom (dose-response relationship) za zunanje lesene elemente. Novost WoodLCC je optimizacija vhodnih podatkov za LCC lesenih gradbenih proizvodov.

Glavne aktivnosti InnoRenew CoE pri projektu: InnoRenew bo za programsko opremo BIM pripravil demo vtičnik za oceno LCC, ki bo prilagojen posebnim potrebam lesenih konstrukcij. Simulacija življenjske dobe, ki je nujna za zanesljivo analizo LCC, bo izvedena na treh ravneh zahtevnosti. Vse bodo objektivno preverjene in tako zagotovile zanesljivost novega orodja in združljivost z dejanskimi primeri v praksi. Cilj je doseči realistični scenarij življenjske dobe za lesene konstrukcije in njihove elemente.

Tree bark as a renewable source of wood protection materials for building applications (BarkBuild)

PROJECT LEADER: David B. DeVallence, PhD

PERIOD: 01.02.2022 – 31.01.2025

FINANCING: European Union – ForestValue Research Programme and Republic of Slovenia's Ministry of Education, Science and Sport

PROJECT COORDINATOR: Stockholms universitet (Sweden)

PARTNERS: Latvian State Institute of Wood Chemistry (Latvia), InnoRenew CoE (Slovenia), Teknologian tutkimuskeskus VTT (Finland), Norsk Institutt for Bioøkonomi (Norway), Warsaw University of Life Sciences (Poland)

Bark protects trees from physical, mechanical and biochemical degradation; however, it is generally considered a low-value waste material from log processing. Within the EU-27 countries, there are approximately 23 million metric tons of tree bark available as an untapped lignocellulosic side-stream that does not compete with food production. The BarkBuild project will use spruce and birch bark as resources to develop new wood treatment formulations and bark-based composites for wooden building materials. Specifically, bark polyphenols and extractives will be used as components within coatings for wood preservatives, fire-retardants and VOC absorbents as well as binder additives within novel biodegradable polymer composites. The project will evaluate and demonstrate the sustainability, safety and potential for the cascading use of bark-derived, modified wood products within the built environment. Demonstration of the final materials should facilitate increased use of wood for construction and building while ensuring safe indoor spaces and preservation of the environment.

InnoRenew CoE project activities: InnoRenew CoE will investigate bark-derived activated carbon and nanoparticle filler materials for both use as composite panel coatings that absorb VOCs and performance evaluation of wood-based composites that include various bark-derived coatings. In addition, InnoRenew COE researchers will assist in the techno-economic analysis and perform life cycle assessment (LCA) of the final coating systems and composites.

Drevesna skorja kot obnovljiv vir za zaščito lesenih gradbenih materialov (BarkBuild)

VODJA PROJEKTA: dr. David B. DeVallance

TRAJANJE: 1. 2. 2022 – 31. 1. 2025

FINANCIRANJE: Evropska unija – ForestValue Research Programme in Ministrstvo za izobraževanje, znanost in šport Republike Slovenije

KOORDINATOR PROJEKTA: Stockholms universitet (Švedska)

PARTNERJI: Latvian State Institute of Wood Chemistry (Latvija), InnoRenew CoE (Slovenija), Teknologian tutkimuskeskus VTT (Finska), Norsk Institutt for Bioøkonomi (Norveška), Warsaw University of Life Sciences (Poljska)

Skorja ščiti drevesa pred fizično, mehansko in biokemično razgradnjijo. Kljub temu pa se pri predelavi hlodovine ta večinoma uporablja kot odpadni material z nizko vrednostjo. V 27 državah EU je na voljo približno 23 milijonov ton drevesne skorje, ki nastane kot stranski proizvod lignoceluloze in ki ne konkurira proizvodnji hrane. Cilj projekta BarkBuild je uporabiti smrekovo in brezovo lubje kot vir za razvoj novih formulacij za obdelavo lesa in kompozitov na osnovi skorje za lesene gradbene materiale. Natančneje, polifenole in ekstrakte iz skorje bodo uporabljeni kot sestavine v zaščitnih premazih za les, zaviralce ognja, absorbent za hlapne organske spojine ter vezivne dodatke v novih biološko razgradljivih polimernih kompozitih. Projekt naznanja varnost in možnost kaskadne uporabe modificiranih lesnih proizvodov, pridobljenih iz skorje, v grajenem okolju. Končni materiali bodo omogočali večjo uporabo lesa v gradbeništvu in stavbah, hkrati pa zagotovili varne notranje prostore.

Glavne aktivnosti InnoRenew CoE pri projektu: V okviru projekta bodo raziskovalci InnoRenew CoE raziskovali aktivni ogljik in polnila iz skorje ter nanodelce za uporabo kot premaze, ki absorbirajo hlapne organske spojine, za kompozitne plošče in ocenjevalni delovanje lesnih kompozitov, ki vključujejo različne premaze iz skorje. Poleg tega bodo pomagali pri tehnično-ekonomski analizi in opravili ocene življenskega cikla (LCA) za končno razvite premazne sisteme in kompozite.

Grant applications

InnoRenew CoE submitted 51 funding proposals in 2021. The total budget of all submitted proposals was €22,202,298.52. Currently, there are 11 pending proposals (five national, six international) with a potential budget for InnoRenew CoE of €13,593,333.72. For the remainder, there were 33 unsuccessful proposals (€7,351,955.80) and seven successful proposals (€1,187,582.50) for the year.

National

Thirty proposals were submitted to national calls for a total budget of €5,634,115.55. From this, 29 proposals were submitted to the Slovenian Research Agency (ARRS). Most of these proposals involved basic projects (17), five were postdoctoral projects, two were applied projects, one was an infrastructure project, one was a target research program and two were research programs. In addition, InnoRenew CoE submitted one application for a bilateral project. InnoRenew CoE successfully submitted a proposal with consortium partners to Slovenia's Ministry of Economic Development and Technology (MGRT) to establish a competence center.

Prijave na nacionalne razpise

V letu 2021 je InnoRenew CoE na razpise prijavil 51 projektov. Skupna vrednost vseh oddanih vlog znaša 22.202.298,52 EUR. V evalvaciji je še enajst prijav (pet nacionalnih in šest mednarodnih), v vrednosti 13.595.333,72 EUR za InnoRenew CoE. Triintrideset prijav (v vrednosti 7.351.955,80 EUR) je bilo za InnoRenew CoE v letu 2021 neuspešnih, sedem predlogov pa je bilo odobrenih, in sicer v vrednosti 1.187.582,50 EUR.

Annual Report

International

There were 21 international funding applications submitted for a total budget of €16,500,469.72. Eight of these applications were submitted to Horizon Europe, four of which listed InnoRenew CoE as the coordinator. Other applications were submitted to the Erasmus+ program (two), ForestValue program (nine), ERC Consolidator Grant (one) and M-Era.Net program (one).

Prijave na mednarodne razpise

Raziskovalci InnoRenew CoE so prijavili 21 mednarodnih projektov (njihova skupna vrednost je 16.500.469,72 EUR). Osem projektnih prijav je bilo oddanih na razpise v okviru programa Obzorje Evropa. Pri štirih od njih je InnoRenew CoE zastopan kot koordinator projekta. Poleg tega sta bili dve prijavi oddani na razpis v okviru programa Erasmus+, devet prijav na Forest Value razpis, ena na ERC Consolidator Grant ter ena M-Era.Net program.

InnoRenew CoE building

Construction of the InnoRenew CoE building in Izola, Slovenia, was completed in 2021. With this, the institute has acquired a unique facility for research and innovation in the field of renewable materials and healthy living environments.

- Start of construction: January 2020
- End of construction: November 2021
- Construction company: VG5 d.o.o. and Marles hiše Maribor
- Construction auditor: PROJEKT d.d. Nova Gorica
- Construction super auditor: Proplus d.o.o.
- Size: 8 200 square meters
- Construction costs: €11 million
- Furniture equipment costs: €600 000
- Research equipment costs: €10 million
- Financing: Republic of Slovenia; European Union, European Regional Development Fund

The InnoRenew CoE building is a hybrid combination of timber, concrete and steel. The upper three floors are entirely wooden, making it the largest wooden building in Slovenia to date.

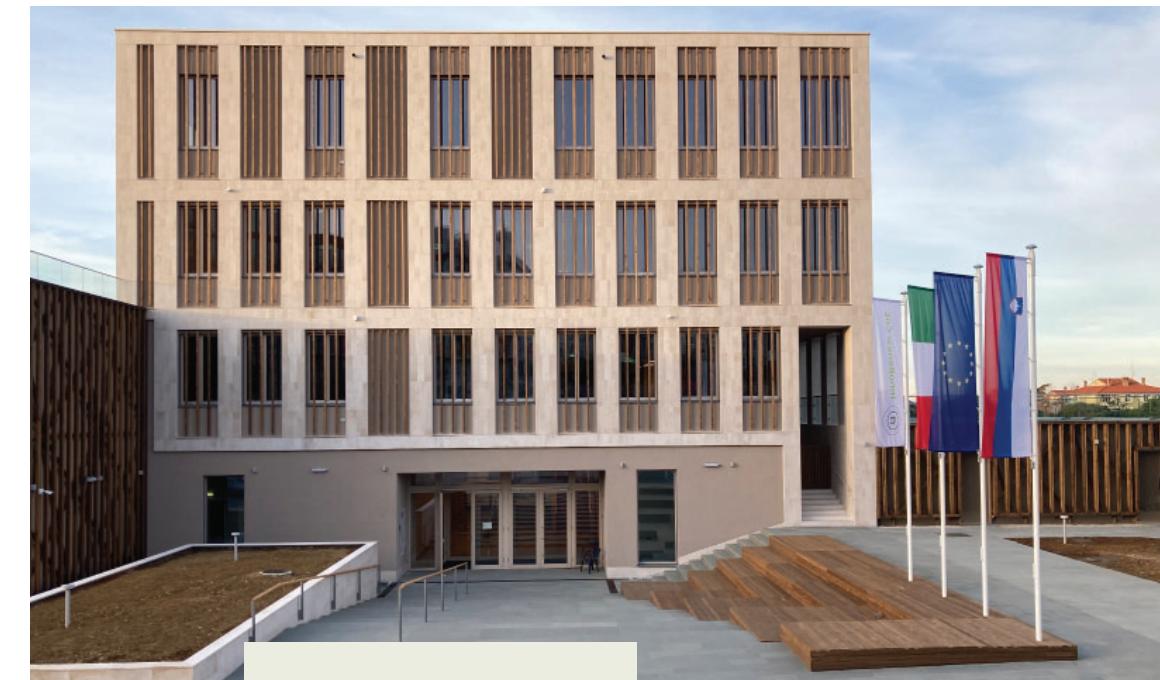

InnoRenew CoE building /
Stavba InnoRenew CoE

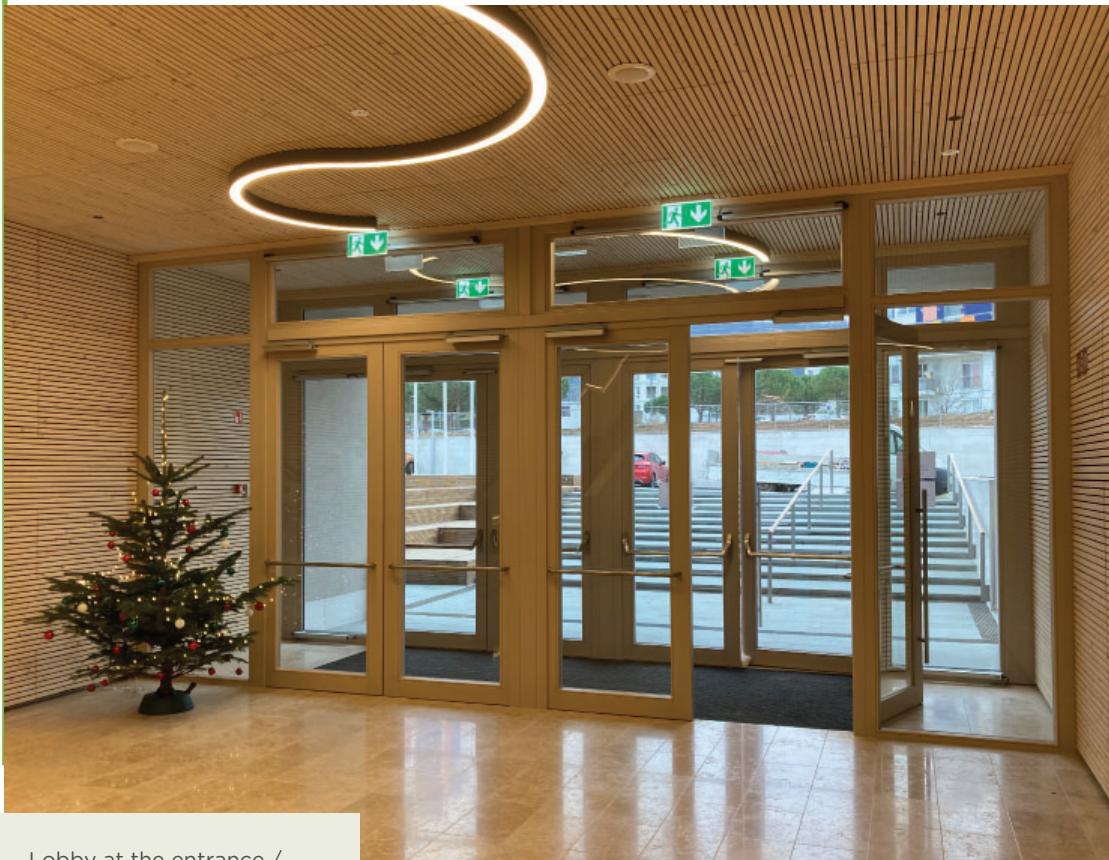

Gradnja stavbe InnoRenew CoE v Izoli se je zaključila v letu 2021. S tem je inštitut pridobil edinstven objekt za raziskave in inovacije na področju obnovljivih materialov in zdravega bivanjskega okolja.

- Začetek gradnje: Januar 2020
- Zaključek gradnje: November 2021
- Izvajalca gradnje: VG5 d.o.o. in Marles hiše Maribor
- Gradbeni nadzor: PROJEKT d.d. Nova Gorica
- Gradbeni supernadzor: Proplus d.o.o.
- Velikost: 8.200 kvadratnih metrov
- Stroški za gradnjo stavbe: 11 milijonov EUR
- Stroški za pohištveno opremo: 600.000 EUR
- Stroški za raziskovalno opremo: 10 milijonov EUR
- Financiranje: Republika Slovenija in Evropska unija iz Evropskega sklada za regionalni razvoj

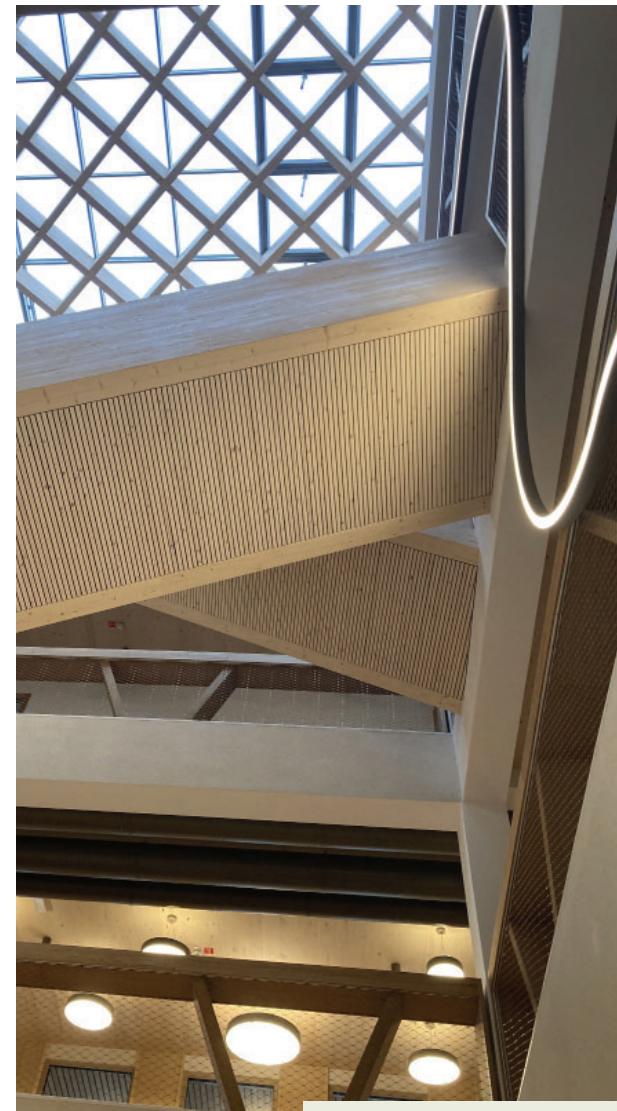

Gre za hibridno konstrukcijo lesa, betona in jekla. Zgornja tri nadstropja glavne stavbe so v celoti lesena, zato je to največja lesena stavba v Sloveniji doslej.

Entrance to the building /
Vhod v stavbo

Lobby at the entrance /
Avla pri vhodu v stavbo

Staircase in the lobby /
Stopnišče v avli

Letno Poročilo 57

The ground floor of the building houses the lobby and research laboratories, which are equipped with state-of-the-art machines where the institute's international, interdisciplinary team strives to make breakthroughs in Slovenian, European and global wood science.

- Human Health Laboratory, designed to investigate the effects of new materials, technologies and systems on human health.
- Composites Laboratory, designed to produce composite samples at the laboratory- and pilot-scale with an emphasis on thermo/hydro-mechanical processing and wood-based composites.
- Characterization Laboratory, designed to study the morphological, physicochemical and rheological characterization of bio-based materials.

Characterization Laboratory /
Laboratorij za karakterizacijo

V pritličju stavbe je avla in raziskovalni laboratorij, opremljeni z vrhunsko opremo, s katero lahko mednarodna interdisciplinarna ekipa inštituta naredi velik preskok v slovenskem, evropskem in svetovnem raziskovalnem prostoru:

- Laboratorij za raziskovanje zdravja ljudi, namenjen raziskovanju vplivov novih materialov, tehnologij in sistemov na zdravje ljudi.
- Laboratorij za pripravo kompozitov, ki je namenjen izdelavi vzorcev kompozitov na laboratorijski in pilotni ravni, s poudarkom na procesih termo/hidro mehanske obdelave in na lesu temelječih kompozitov.
- Laboratorij za karakterizacijo, namenjen proučevanju morfoloških, kemijskih in reoloških lastnosti materialov.

Characterization Laboratory /
Laboratorij za karakterizacijo

- Physical Testing Laboratory, designed to perform standardized and non-standardized materials testing to determine basic mechanical properties.
- Microscopy Laboratory, designed to investigate the structures and morphology of renewable materials at the microscopic level.

Climatic chamber in the Physical Testing Laboratory /
Klima komore v laboratoriju za fizikalna testiranja

- Laboratorij za fizikalna testiranja za izvajanje standardiziranih in ne-standardiziranih testiranj materialov za določanje osnovnih mehanskih lastnosti.
- Laboratorij za mikroskopiranje, kjer preučujejo strukture in morfologijo obnovljivih materialov na mikroskopski ravni.

Microscopy Laboratory /
Laboratorij za mikroskopiranje

- Acoustic Properties Laboratory, fully equipped and designed to perform research that investigates architectural and building acoustics, noise control, structural dynamics and vibrations.
- High-powered Computing Laboratory, designed and equipped to support research, development and service needs for information processing and analysis.
- Workshop and Machine Shop, designed for in-house preparation, conditioning and storage of experimental samples and prototypes.

- Laboratorij za raziskovanje akustičnih lastnosti, ki je v podporo ostalim laboratorijem in namenjen akustičnemu testiranju strukturnih elementov v naravni velikosti, kot so talni, stenski in stropni sistemi.
- Laboratorij za visoko zmogljivo računalništvo, ki je v podporo prej navedenim laboratorijem in namenjen shranjevanju podatkov ter služi kot center za visoko zmogljivo računalništvo za potrebe razvoja in opravljanja storitev.
- Tehnična delavnica, ki je namenjena pripravi in shranjevanju vzorcev obnovljivih

The first floor is dedicated to meeting and conference rooms that can hold up to 100 people. All rooms are equipped with digital and IT solutions for high-quality in-person and virtual events. There is also a smaller conference room designed for events where simultaneous translation is needed. An open space is available for networking and co-working.

The second and third floors are office spaces for the institute's employees.

The layout of rooms and interior fittings are designed to encourage movement during work, with active offices whose ergonomically designed furniture encourages employees to change positions at work and "strategic points", such as a printer that is not at hand, that demand a walk.

Materials to be touched, such as railings, doors, electric switches and furniture, were also selected according to results of the institute's current research on the type of wood most likely to affect human well-being.

All rooms are naturally illuminated to minimize the use of artificial light for health and environmental reasons. Further, the interior of the building is, for the first time in Slovenia, equipped according to the principles of REED (restorative environmental and ergonomic design), which emphasizes the use of natural materials to create ergonomic, accessible, adaptable and sustainable buildings.

The building is equipped with a smart management system. For example, depending on temperature and wind conditions, the outer screen shades are automatically raised or lowered, and the windows are opened or closed, to ventilate the interior. The facility is energy efficient and airtight, and ventilation is regulated by heat recovery and also by natural ventilation during peak weather conditions. During construction, 400 sensors were installed to measure the moisture content of the structural wood. This research enables InnoRenew CoE scientists to learn how such a building behaves at different boundary conditions and, consequently, if the data will make for easier and better planning of wooden construction in the future. These sensors measure various parameters, from temperature, humidity, acoustics, dust and emissions to static loads, aging of wood on façades, biotic, chemical and physical quantities.

Prvo nadstropje je namenjeno sejnim in konferenčnim dvoranam. Največja sprejme do 100 ljudi. Vse dvorane so opremljene z digitalnimi in IT rešitvami, ki omogočajo izvedbo kakovostnih dogodkov v stavbi in tudi preko spleta. Manjša dvorana je namenjena izvedbi dogodkov, kjer je potrebno simultano prevajanje, odprt prostor v nadstropju pa je namenjen mreženju in coworkingu.

V drugem in tretjem nadstropju so kabineti za zaposlene.

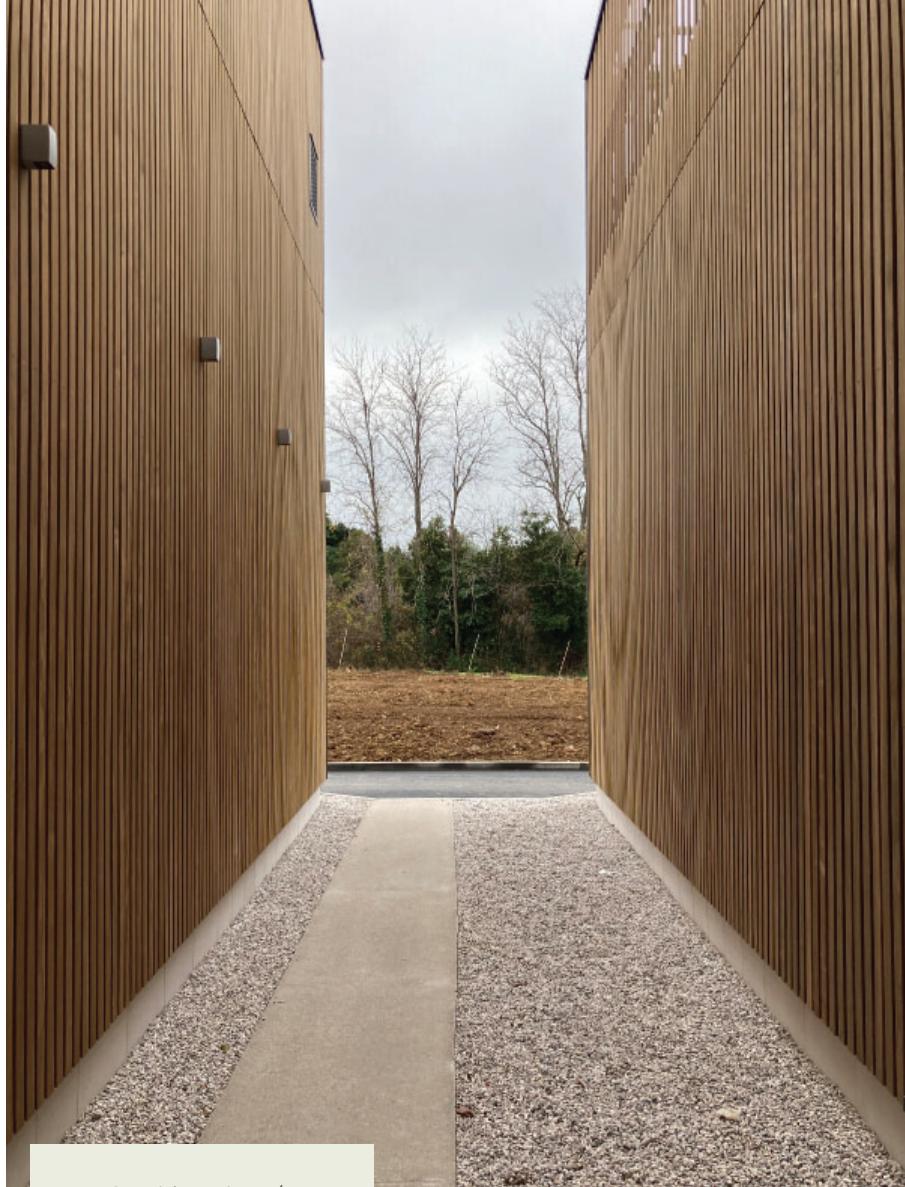

Razpored prostorov in notranja oprema spodbujata gibanje med delom, denimo z aktivnimi pisarnami, katerih ergonomsko oblikovano pohištvo zaposlene spodbuja k spremjanju položajev pri delu, ali premišljene postavitev »strateških« točk, kot je tiskalnik, ki ni na dosegu roke, ampak se je treba do njega sprehoditi.

Materiali na površinah, ki se jih dotikamo, kot so ograje, vrata, stikala, pohištvo, so bili izbrani glede na rezultate aktualnih raziskav inštituta o tem, kakšna struktura in vrsta lesa najugodnejše vplivata na človekovo dobro počutje.

Vsi prostori so naravno osvetljeni z namenom zmanjšanja uporabe umetne svetlobe iz zdravstvenih in okoljskih razlogov. Notranjost zgradbe je prvič v Sloveniji opremljena po načelih REED (ang. Restorative Environmental and Ergonomic Design – restorativno okoljsko in ergonomsko oblikovanje), ki temelji na uporabi naravnih virov in ustvarjanju ergonomsko oblikovane, dostopne, prilagodljive in trajnostne gradnje.

Stavba je opremljena s sistemom za pametno upravljanje, kot na primer samodejno dviganje/spuščanje senčil ter odpiranje ali zapiranje oken, glede na temperaturne in vetrovne razmere, da se notranjost haldi oziroma ogreva. Objekt je nizkoenergijski in zrakotesen, prezračevanje pa je urejeno z rekuperacijo odpadne toplote, pa tudi z naravnim zračenjem. Že med gradnjo je bilo nameščenih 400 senzorjev za merjenje vsebnosti vlage v konstrukcijskem lesu. To omogoča raziskovalcem inštituta spoznavanje načinov zaščite leseni konstrukcij med gradnjo, spremeljanje staranja lesa v stavbah, njegovega obnašanja pri različnih robnih pogojih in posledično lažje ter boljše načrtovanje lesene gradnje v prihodnosti. Senzorji merijo različne parametre, od temperature, vlage, akustike, prahu in emisij do statičnih obremenitev, staranja lesa na fasadah, biotskih, kemičnih in fizikalnih količin.

All roofs are flat, designed as extensive green roofs, thus realizing the principle that "we should return to nature what we took from it", and, at the same time, strengthen the building's insulation. Roof terraces, which cover 1400 square meters, serve as an open-air test site. The institute also provides the wood industry with space, research equipment and data analysis for testing their wooden products or buildings.

Outside atrium /
Zunanji atrij

Vse strehe so ravne in zatravljene, s čimer se uresničuje načelo, da naj bi naravi vrnili, kar smo ji vzeli, in obenem se okrepi izolacijo stavbe. Pohodne strešne terase, ki obsegajo 1.400 kvadratnih metrov, služijo tudi kot testni poligon na prostem. Inštitut lesni industriji tako nudil tudi prostor, raziskovalno opremo ter zbiranje in analizo podatkov za testiranje njihovih lesnih izdelkov oziroma objektov.

Outside staircase /
Zunanje stopnišče

Laboratory equipment

The InnoRenew project represents an investment in infrastructure as well as the purchase and installation of equipment. It is co-financed by the European Regional Development Fund, within the framework of the Operational Programme for the Implementation of the EU Cohesion Policy in the period 2014-2020 in Slovenia, and the Republic of Slovenia's Ministry of Education, Science and Sport. The purpose is to build needed research infrastructure to provide top-level knowledge and carry out research and innovation in the field of renewable materials and healthy environments.

In 2021, six pieces of research equipment were purchased for InnoRenew CoE's Characterization and Physical Testing laboratories. The institute's overall ICT system and operational equipment for its new building were installed along with the furniture for laboratories and tools for the workshop.

Laboratorijska oprema

Investicijski projekt InnoRenew je namenjen naložbi v izgradnjo infrastrukture ter nakupu in montaži opreme. Investicijski projekt sofinancirata Evropski sklad za regionalni razvoj v okviru Operativnega programa za izvajanje evropske kohezijske politike v obdobju 2014-2020 v Sloveniji in Ministrstvo za izobraževanje, znanost in šport Republike Slovenije. Namen investicije je izgradnja raziskovalne infrastrukture, ki je pomembna za zagotavljanje vrhunskega znanja ter za izvajanje raziskav in inovacij na področju obnovljivih materialov in zdravega bivanjskega okolja.

V letu 2021 je bilo pridobljenih šest kosov laboratorijske opreme, namenjene raziskovanju v laboratoriju za karakterizacijo in za fizikalna testiranja. Prav tako je bil vzpostavljen IKT sistem celotne zgradbe z vso pripadajočo opremo, izvedena je bila dobava pohištva za laboratorije in ročno orodje za delavnico.

Industrial collaboration

In 2021, InnoRenew CoE collaborated with 116 partners from industry via projects or directly. Most industry partners come from Slovenia, but a large number are also international, including those from Austria, Australia, Belgium, Croatia, Denmark, Estonia, Finland, France, Germany, Greece, Italy, the Netherlands, Norway, Poland, Romania, Spain, Switzerland, Sweden and the United Kingdom.

The institute has 22 direct industrial collaborators from Austria, Australia, Denmark, Finland, Romania and Slovenia.

InnoRenew CoE's industry partners operate within the wood, information technology, manufacturing and agricultural sectors.

Living Lab InnoRenew

In 2021, Living Lab InnoRenew had 120 members from 31 countries (59 small and medium-sized enterprises, 51 educational or research institutes, five regional development agencies and five individuals).

Living Lab InnoRenew offers activities and services according to membership status: gold, silver or associate. Currently, Living Lab InnoRenew has 11 gold members and 109 associates.

RRA LUR

Univerza v Mariboru

Ob koncu leta 2021 ima Živi laboratorij InnoRenew 120 članov iz 31 držav. Od teh je 59 nacionalnih in mednarodnih malih in srednje velikih podjetij, 51 nacionalnih in mednarodnih izobraževalnih ustanov in raziskovalnih organizacij, pet regionalnih razvojnih agencij in pet zainteresiranih posameznikov. Dejavnosti in storitve, ki jih ponuja Živi laboratorij InnoRenew, se razlikujejo glede na status članov: zlato, srebrno ali pridruženo članstvo. Živi laboratorij InnoRenew ima trenutno enajst zlatih in 109 pridruženih članov.

In November and December 2021, Living Lab InnoRenew hosted three webinars from Gdańsk University of Technology's (GUT) expert researchers. GUT is a gold member of Living Lab InnoRenew.

V mesecu novembru in decembru 2021 je Živi laboratorij InnoRenew gostil tri predavanja raziskovalcev iz Tehniške univerze v Gdańsku (Politechnika Gdańsk, GUT), ki je zlata članica laboratorija.

Events

InnoRenew CoE organized and co-organized 49 events in 2021, including workshops, meetings, trainings, exhibitions, celebrations and international conferences. Some were in-person, some were online and some were a hybrid of both.

Events organized by InnoRenew CoE in 2021

	Event / Dogodek	Type / Vrsta	Location / Lokacija	Date / Datum
1	InnoRenew CoE General Assembly Meeting	Presentation and progress report	Online	12.01.2021
2	FAÇADE webinar series, Dr. Kévin Candelier, Environmental impact of thermally modified wood	Webinar series	Online	13.01.2021
3	FAÇADE webinar series, Dr. Oihana Gordobil, Natural resources as anti-UV agents	Webinar series	Online	17.02.2021
4	National Symposium of NIR Spectroscopy, NIR Italia online	International conference	Online	24.02.2021-25.02.2021
5	InnoRenew project partners meeting	Presentation and progress report	Online	01.03.2021
6	FAÇADE webinar series, Dr. Tanja Bagar, Hemp as the source of nutrients and essential phytochemicals	Webinar series	Online	17.03.2021
7	InnoRenew CoE Council of Experts	Presentation and progress report	Online	23.03.2021
8	Mental Health in the Built Environment (DESIRE project)	Workshop	Online	31.03.2021
9	Ergonomics in the Built Environment (DESIRE project)	Workshop	Online	01.04.2021
10	FAÇADE webinar series, Dr. David DeVallance, Potential of carbonized biomass for advanced material applications	Webinar series	Online	14.04.2021
11	Training on Key Enabling Technologies Educational Materials and Online Courses (BRACKET project)	Training	Online	19.04.2021

V letu 2021 je InnoRenew CoE organiziral in soorganiziral 49 dogodkov, med katerimi so bile delavnice, srečanja, izobraževanja, posebne prireditve, razstave, slovesnosti in mednarodne konference. Nekaj dogodkov je potekalo v živo, nekaj po spletu, nekateri pa so bili organizirani v hibridni obliki, v živo in po spletu.

National Symposium of NIR Spectroscopy, NIR Italia online

From 24-25 February 2021, InnoRenew CoE, the Italian Society for Near-Infrared Spectroscopy (SISNIR) and the University of Primorska hosted the National Symposium of NIR Spectroscopy, NIR Italia online.

More than 90 participants from all over the world had the opportunity to listen to 26 oral presentations and nine poster presentations across six sessions.

Slovenian President Pahor and Greek President Sakellaropoulou visit

Slovenian President Borut Pahor and Greek President Katerina Sakellaropoulou visited the InnoRenew CoE construction site in Livade, Izola (Slovenia). The two were interested to learn about the building's seismic safety as Slovenia and Greece are both in areas where earthquake risk exists.

During the visit, Dr. Andreja Kutnar noted that InnoRenew CoE is dedicated to exploring earthquake safety for buildings, seismic rehabilitation and design of integrated construction solutions where renewable materials, like wood, play an important role.

From left to right: Danilo Markočič, Municipality of Izola's mayor, Dr Klavdija Kutnar, University of Primorska's rector, Borut Pahor, Slovenian President, Katerina Sakellaropoulou, Greek President, and Dr Andreja Kutnar, InnoRenew CoE director at the construction site in Izola / Na fotografiji z leve: župan Občine Izola Danilo Markočič, rektorica Univerze na Primorskem dr. Klavdija Kutnar, predsednica Republike Slovenije Borut Pahor, predsednica Helenske republike Katerina Sakellaropoulou in direktorica InnoRenew CoE dr. Andreja Kutnar na gradbišču v Izoli

Slovenski predsednik Borut Pahor in grška predsednica Katerina Sakellaropoulou sta obiskala InnoRenew CoE na gradbišču v Izoli. Zanimala ju je predvsem tema potresne varnosti stavb, saj je to pomembna tema za obe državi.

Dr. Andreja Kutnar je med obiskom dejala, da se v InnoRenew CoE poleg raziskovanja potresne varnosti stavb, posvečajo tudi protipotresni sanaciji stavb in snovanju celostnih gradbenih rešitev, kjer igrajo obnovljivi materiali, kot je les, pomembno vlogo.

Več kot 90 udeležencev simpozija je v šestih konferenčnih sklopih prisluhnilo 26 predavanjem in devetim predstavitvam posterjev.

Od 24. do 25. februarja 2021 je InnoRenew CoE skupaj z Univerzo na Primorskem in Italijanskim združenjem za bližnjo infrardečo spektroskopijo (Società Italiana di Spettroscopia NIR – SISNIR), organiziral nacionalni simpozij NIR Italia online.

InnoRenew CoE International Conference 2021

From 10-11 June 2021, InnoRenew CoE and the University of Primorska hosted the online InnoRenew CoE International Conference 2021 (IRIC2021), "Healthy and Sustainable Renovation with Renewable Materials".

IRIC2021 featured 38 presentations about the key role of renewable materials in achieving climate goals and renovating buildings.

The keynote speaker was Dr. Lisanne Havinga, an expert in circularity and assistant professor of Building Performance and Principal Scientist System Integration at Technische Universiteit Eindhoven.

Information shared at the conference is of great benefit to the New European Bauhaus community as topics like cultural heritage, new construction, renovation, materials, health and related social and business issues were presented.

*Dr. Michael Burnard,
InnoRenew CoE deputy director*

Kar smo danes slišali na konferenci, je zelo koristno tudi za Novi evropski Bauhaus, saj so predstavitev pokrivale tako kulturno dediščino, kot novogradnjo, obnovo, materiale, zdravje in ostale relevantne družbene in poslovne izzive.

*Dr. Michael Burnard,
namestnik direktorice InnoRenew CoE*

I believe we have to approach the key challenges of our time, global warming and biodiversity loss, by evaluating scenarios for sustainable renovation and energy transition in a way that takes into account all environmental impacts.

*Dr. Lisanne Havinga,
IRIC2021 keynote speaker*

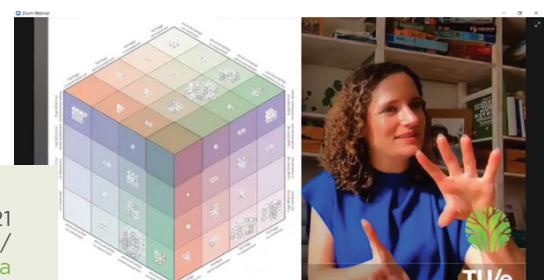

Prepričana sem, da se moramo s ključnimi izzivi današnjega časa, globalnim segrevanjem in izgubo biodiverzitete, soočiti z določanjem scenarijev za trajnostno obnovo in energetski prehod, ki bodo upoštevali vse vplive na okolje.

*dr. Lisanne Havinga,
osrednja govorka na IRIC2021*

Od 10. do 11. junija 2021 sta InnoRenew CoE in Univerza na Primorskem organizirala dvodnevno mednarodno konferenco »Z obnovljivimi materiali do zdravih in trajnostnih obnov« (IRIC2021).

Na spletni konferenci je sodelovalo 38 strokovnjakov, ki so predstavili ključno vlogo obnovljivih materialov pri doseganju podnebnih ciljev in pri obnovi stavb.

Osrednji nagovor na konferenci je imela dr. Lisanne Havinga, strokovnjakinja za krožnost, ki je tudi docentka na področju okoljske učinkovitosti stavb in glavna raziskovalka združevanja sistemov na Tehniški univerzi v Eindhovenu (Technische Universiteit Eindhoven).

*Dr. Lisanne Havinga, IRIC2021 keynote speaker /
Dr. Lisanne Havinga, osrednja govorka na IRIC2021*

Workshops and Trainings

InnoRenew CoE organized two workshops and one training under the Erasmus+ research projects DESign for all methods to cREAtre age-friendly housing (DESIRE) and Boosting a novel and innovative tRAining approaCh of Key Enabling Technologies (BRACKET).

InnoRenew CoE researchers involved in the DESIRE project hosted two workshops to help participants better understand the needs of older adults related to mental health in the built environment and to identify ergonomic features of the built environment important to older adults.

InnoRenew CoE researchers involved in the BRACKET project organized the "Training on Key Enabling Technologies Educational Materials and Online Courses".

In addition, a series of lectures for the "Competence center for human resources development in woodworking" (KOCles 3.0) project were given by InnoRenew CoE employees to KOCles 3.0 project partners on aspects of wood science and wood products.

InnoRenew CoE researchers also educated elementary school students through the "Let's Explore Wood" workshops. Researchers visited eight elementary schools in Slovenia to teach students about the versatility and beauty of wood as well as the variety of professions associated with it. InnoRenew CoE hopes to raise young people's awareness about the importance of using natural, renewable resources and gain knowledge about the proper use of these materials with the workshops, which are co-financed by the Public Agency SPIRIT Slovenia.

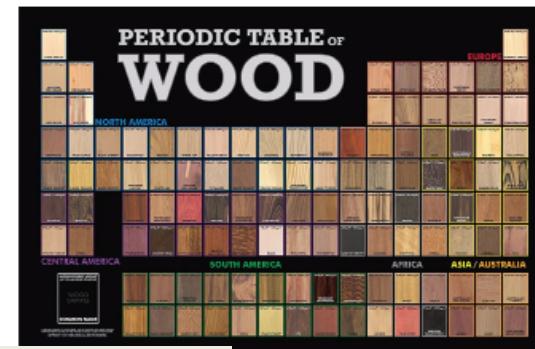

InnoRenew CoE je organiziral dve delavnici in eno izobraževanje v okviru Erasmus + raziskovalnih projektov Metode univerzalnega oblikovanja starostnikom prijaznih bivanjskih prostorov (DESIRE) in Spodbujanje novega in inovativnega pristopa k usposabljanju za uporabo ključnih tehnologij (BRACKET).

Raziskovalci vključeni v projekt DESIRE so pripravili dve delavnici, ki sta bili namenjeni boljšemu poznavanju potreb starejših odraslih in njihovem duševnem zdravju v grajenem okolju ter prepoznavanju ergonomskih značilnosti grajenega okolja, ki so pomembne za starejše odrasle.

Raziskovalci vključeni v projekt BRACKET pa so pripravili izobraževanje o ključnih tehnologijah in spletnem tečaju BRACKET (Training on Key Enabling Technologies Educational Materials and Online Courses).

V sklopu projekta Kompetenčnega centra za razvoj kadrov v lesarstvu KOCles 3.0 so raziskovalci InnoRenew CoE pripravili serijo predavanj za partnerje projekta KOCles 3.0 o različnih vsebinah lesarstva in lesene proizvodnje.

Aktivno so tudi izobraževali učence različnih osnovnih šol po Sloveniji z delavnicami Let's explore wood. Obiskali so osem osnovnih šol in učencem predstavili vsestransko in lepoto dela z lesom ter pestrost poklicev, ki so vezani nanj. S takimi aktivnostmi dvigujemo raven ozaveščanja mladih o pomembnosti uporabe naravnih, obnovljivih virov ter pomen poznavanja lastnosti materialov za njihovo pravilno rabo. Delavnice sofinancira Javna agencija SPIRIT Slovenija.

Lectures for KOCles 3.0 /
Predavanja za KOCles 3.0

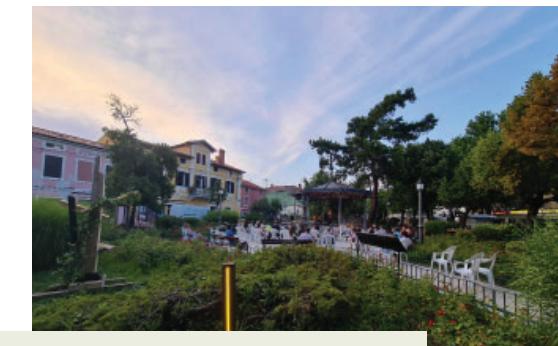

LOOSE CELLS – Innovating at the Crossfield of Art and Science

In July 2021, the unveiling of objects created as part of the LOOSE CELLS – Innovating at the Crossfield of Art and Science project took place in Izola's Pietro Cope Park. University of Primorska and University of Nova Gorica students involved in the project created these objects under the mentorship of researchers and artists. The project, initiated by InnoRenew CoE, connected science, art, technology and education to develop a new direction of research that encourages radical innovation and introduces artistic thinking. The students created the basis for connecting these areas, which inspires development of social and economic innovations on an international scale.

Experts from the University of Primorska, University of Nova Gorica's School of Arts and PiNA were involved in creation of the project.

Julija 2021 je v parku Pietro Cope v Izoli potekalo prvo razkritje objektov, ki so jih študenti skupaj z raziskovalci in umetniki ustvarili v okviru projekta Proste Celice - Inoviranje v polju med umetnostjo in znanosti. Temeljna ideja projekta je povezovanje znanosti, umetnosti, tehnologije in izobraževanja ter vzpostavitev situacij njihovega srečevanja. Gre za razvoj nove smeri raziskovanja, ki spodbuja radikalno inovativnost in v inoviranje vpeljuje umetniško razmišljanje. Študenti Univerze na Primorskem in Akademije umetnosti Univerze v Novi Gorici so v projektu ustvarjali na podlagi povezovanja omenjenih področij, ki pomembno navdihuje razvoj družbenih in gospodarskih inovacij tudi v mednarodnem merilu.

Projekt je zasnoval konzorcij štirih partnerjev, poleg raziskovalnega inštituta InnoRenew CoE še Univerza na Primorskem, Akademija umetnosti Univerze v Novi Gorici in Kulturno izobraževalno društvo PiNA (s podporo Mreže centrov raziskovalnih umetnosti in kulture RUK).

Installation in Izola's Pietro Cope Park /
Postavitev v parku Pietro Cope, Izola

Charm of Wood

For the fifth consecutive year, InnoRenew CoE collaborated and co-organized the Charm of Wood traveling exhibition, which was open for visits at the University of Primorska during July 2021. For over a decade, Charm of Wood has been promoting and fostering the use of wood and wood products, raising awareness about the sustainability of this natural material.

Že peto leto zapored je InnoRenew CoE soorganiziral potujoči del razstave Čar lesa. Ta je bila na ogled v prostorih Univerze na Primorskem v mesecu juliju. Čar lesa že več kot desetletje promovira in spodbuja rabo lesa in lesenih izdelkov ter ozavešča o trajnostnem vidiku rabe tega naravnega materiala.

Charm of Wood 2021 / Čar lesa 2021

Protection of bronze monuments public event

In August 2021, InnoRenew CoE hosted an event for the "Protection of bronze monuments in the changing environment" project at Tartini Square in Piran, Slovenia.

During the event, a plaque was placed next to the Tartini monument to engage the public in the protection of cultural heritage through the collection of photographs that document damage to bronze monuments.

The Institute for the Protection of Cultural Heritage of Slovenia led this project in collaboration with InnoRenew CoE and the Slovenian National Building and Civil Engineering Institute, and it was financed by the Slovenian Research Agency (ARRS).

Konec meseca avgusta je InnoRenew CoE pripravil dogodek v okviru projekta Zaščita bronastih spomenikov v spremenljivem okolju, na Tartinijevem trgu v Piranu.

Na dogodku smo predstavili tablo, ki je nameščena zraven Tartinijevega spomenika in katere namen je spodbujanje zanimanja širše javnosti za zaščito kulturne dediščine preko vključevanja javnosti v zbiranje podatkov (fotografij) o poškodbah spomenikov.

Projekt je vodil Zavod za varstvo kulturne dediščine, kot partnerji pa so sodelovali tudi InnoRenew CoE in Zavod za gradbeništvo, financiran pa je bil s strani Javne agencije za raziskovalno dejavnost RS (ARRS).

Project event at Tartini Square in Piran / Dogodek projekta na Tartinijevem trgu v Piranu

Highlighted achievements in 2021

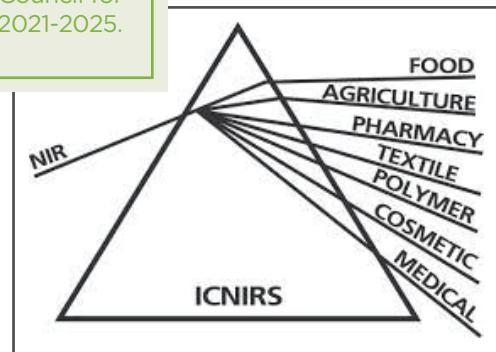

Dr. Michael Burnard became vice president of InnovaWood, an international organization that connects forestry and timber experts to support innovation in these sectors.

Dr. Michael Burnard je postal podpredsednik mednarodne organizacije InnovaWood, ki povezuje znanstvenike s področij gozdarstva in lesarstva, s ciljem spodbujanja inovativnosti v omenjenih sektorjih.

Dr. Anna Sandak was elected as a member of the President's Advisory Committee of the International Council for Near Infrared Spectroscopy (ICNIRS) for 2021-2025.

Dr. Anna Sandak je postala članica svetovalnega odbora predsednika mednarodnega odbora International Council for Near Infrared Spectroscopy (ICNIRS), za obdobje 2021-2025.

Dr. Iztok Šušteršič was elected as the Management Committee Chair for COST Action CA20139 - Holistic Design of Taller Timber Buildings.

Dr. Iztok Šušteršič je postal predsednik upravnega odbora akcije Cost CA20139 - Holistični dizajn visokih leseni zgradb.

InnoRenew CoE became a partner in the New European Bauhaus, a high-level recognition of the institute's excellent work.

InnoRenew CoE je postal partner Novega evropskega Bauhausa, kar je veliko priznanje za odlično delo na inštitutu.

New European Bauhaus
beautiful | sustainable | together

InnoRenew CoE went through the European Foundation for Quality Management (EFQM) evaluation and proudly obtained a four-star EFQM certificate.

InnoRenew CoE se je prijavil na ocenjevanje Evropske fundacije za upravljanje kakovosti (EFQM) in s ponosom pridobil certifikat s štirimi zvezdicami.

Dissemination and outreach

InnoRenew CoE employees attended 66 international conferences and 12 national conferences in 2021. In-person events took place in Austria, the Czech Republic, France, Italy, North Macedonia, Slovenia, Spain and the United States.

Outreach

InnoRenew CoE targets national and international audiences through multiple channels, including the institutional website (innorennew.eu), to keep the public informed about the institute's activities and results. In 2021, 242 news items and five newsletters were prepared as well as 46 feature articles that were also shared each Wednesday on social media under #WednesdayRead.

InnoRenew CoE's website was visited 49,088 times last year. Approximately 38 percent of users were from Slovenia, seven percent from the USA, six percent from China, and others were from other countries. InnoRenew CoE is active on social media with 1,633 likes on Facebook, 1,307 followers on Twitter, 1,523 followers on LinkedIn and 44 videos posted to its YouTube channel.

In 2021, InnoRenew CoE was featured in 290 newspaper articles, 18 television shows and 8 radio programs.

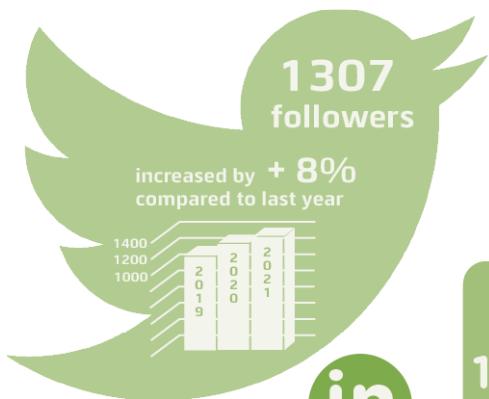

InnoRenew CoE za obveščanje slovenske in mednarodne javnosti uporablja številne kanale, vključno s svojo spletno stranjo (innorennew.eu). V letu 2021 je objavil 242 novic in pet novičnikov. Na družbenih omrežjih se poleg rednih novic pod ključnikom #WednesdayRead vsako sredo deli zanimiv prispevek, objavljen na spletni strani InnoRenew CoE. V letu 2021 je bilo objavljenih 46 takih prispevkov.

Spletna stran InnoRenew je imela 49.088 obiskov. Približno 38 odstotkov vseh uporabnikov je iz Slovenije, sedem odstotkov iz ZDA, šest iz Kitajske, ostali pa so iz ostalih držav sveta. Dejavniki smo tudi na naših spletnih družbenih omrežjih na Facebooku, Twitterju, LinkedInu in YouTubu, kjer se število aktivnih obiskovalcev in sledilcev še naprej povečuje. Na koncu leta 2021 smo zabeležili 1633 všeckov na Facebooku, 1307 sledilcev na Twitterju in 1523 na LinkedInu, na kanalu YouTube pa naloženih 44 videoposnetkov.

V letu 2021 je bil InnoRenew CoE predstavljen in omenjen v 290 nacionalnih in mednarodnih časopisih ter revijah, v 18 televizijskih programih in osmih radijskih oddajah.

Research visits

InnoRenew CoE employees undertook ten extended research visits abroad in 2021.

V letu 2021 so zaposleni v InnoRenew CoE opravili deset daljših raziskovalnih obiskov v tujini.

Memberships

Institutional / Članstva InnoRenew CoE

InnoRenew CoE holds organizational memberships in nine associations that are important to the institute's research. In 2021, InnoRenew CoE became a partner in the New European Bauhaus, the European Commission's initiative for sustainable building.

InnoRenew CoE je član devetih združenj, ki so pomembna za raziskovalna področja inštituta. V letu 2021 je InnoRenew CoE postal tudi partner pobude Novi evropski Bauhaus – glavne iniciative Evropske komisije za trajnostno gradnjo.

InnoRenew CoE institutional memberships / Članstva InnoRenew CoE v združenjih

	Organization / Združenje	Membership / Članstvo
1	InnovaWood	Full
2	Forest Products Society	Bronze
3	European Forestry Institute	Associate
4	EURAXESS – Researchers in Motion	Contact Point
5	Woodrise International Alliance	Member
6	Slovenian Institute for Standardization	Member
7	Strategic Research and Innovation Partnership Smart Buildings and Home Including Wood Chain	Member
8	Strategic Research and Innovation Partnership Network for the Transition into Circular Economy	Member
9	New European Bauhaus	Partner

COST Actions / Akcije COST

In 2021, the institute has employees engaged in 20 thematically appropriate COST Actions. COST (European Cooperation in Science and Technology) Actions are useful platforms to enhance researchers' networking.

Zaposleni v InnoRenew CoE so bili v letu 2021 vključeni v 20 tematsko ustreznih akcij COST. Akcije COST (European Cooperation in Science and Technology) so zelo koristna in uporabna platforma, ki spodbuja mreženje.

InnoRenew CoE COST Action involvement / Vključenost InnoRenew CoE v akcijah COST

	COST Action / Akcija COST	Member(s) / Člani
1	CA16226 Indoor living space improvement: Smart Habitat for the Elderly	Michael Burnard (MC member, vice chair) Jakub Sandak (MC substitute) Anna Sandak (MC member, WG vice-leader) Michael Mrissa (WG member) Dean Lipovac (WG member)
2	CA16114 REthinking Sustainability TOWards a Regenerative Economy	Michael Burnard (MC member) Iztok Šušteršič (MC substitute)
3	CA16215 European network for the promotion of portable, affordable and simple analytical platforms	Michael Burnard (MC substitute) Oihana Gordobil (WG member) Jakub Sandak (MC member)
4	CA15216 European Network of Bioadhesion Expertise: Fundamental Knowledge to Inspire Advanced Bonding Technologies	Anna Sandak (WG member)
5	CA17107 European Network to connect research and innovation efforts on advanced Smart Textiles	Laetitia Marrot (MC substitute)
6	CA18201 An integrated approach to conservation of threatened plants for the 21st Century	Amy Simmons (Grant holder manager/administrator)
7	CA18234 Computational materials sciences for efficient water splitting with nanocrystals from abundant elements	Veerapandian Ponnuchamy (MC member, WG member)
8	CA18204 Dynamics of placemaking and digitalization in Europe's cities	Ana Slavec (MC member), Tim Mavrič (MC substitute)
9	CA18236 Multi-disciplinary innovation for social change	Nežka Sajinčič (MC member)
10	CA16228 European Network for Game Theory	Miklós Krész (WG member)
11	CA19126 Positive Energy District European Network	Michael Mrissa (MC), Sidra Aslam (MC substitute)
12	CA17128 Establishment of a Pan-European Network on the Sustainable Valorisation of Lignin	Oihana Gordobil (WG member)

COST Action / Akcija COST

Member(s) / Člani

13	CA18220 European network of FURan based chemicals and materials FOR a Sustainable development	René Herrera Díaz (MC member)

20	CA20127 Waste biorefinery technologies for accelerating sustainable energy	Oihana Gordobil (MC member)

Individual memberships / Individualna članstva zaposlenih

InnoRenew CoE employees are individual members of 90 national and international organizations, which span the fields of wood science, wood technology, forestry, mathematics, kinesiology, education and research.

Zaposleni v InnoRenew CoE so člani 90 nacionalnih in mednarodnih združenj. Večina teh organizacij je s področij lesarstva, lesarske tehnologije, gozdarstva, matematike, kineziologije, izobraževanja in raziskovanja kot takega.

Teaching

Thirty-one InnoRenew CoE employees had teaching assignments at six higher education faculties during the 2020-2021 academic year for courses that spanned the fields of wood science, computer science, renewable materials, sustainability, research and scientific writing, kinesiology, ergonomics and data science.

InnoRenew CoE employee teaching assignments for academic year 2020-2021 / Pedagoška dejavnost zaposlenih v InnoRenew CoE v študijskem letu 2020/21

University / Univerza	Faculty / Fakulteta	Employee / Zaposleni	Academic rank / Akademski naziv	Course(s) / Ime predmetov
University of Primorska	Faculty of Mathematics, Natural Sciences and Information Technologies	Miklós Krész	Associate professor	Data Science Seminar; Selected Topics in Theoretical Computer Science; Mining Massive Data; Design and Analysis of Experiments; Renewable Materials and Healthy Built Environments
		Aleksandar Tošić	Teaching	Programming 1 and 3
		Igor Gavrić	Assistant professor	Wood Design and Structural Analysis
		Iztok Šušteršič	Assistant professor	Wood Design and Structural Analysis; Renewable Materials for Healthy Built Environments; Preparation of doctoral disposition - seminar; The built environment and role of engineering; Holistic design of contemporary timber buildings
		Dean Lipovac	Assistant	Qualitative Research
		Matthew Schwarzkopf	Associate professor	Wood Science and Technology; Wood Composites; Selected topics in wood science and technology; Selected topics in the characterisation of renewable materials; Sustainable built environments study programme coordinator
		Michael Mrissa	Full professor	Data Engineering and Distributed Information Systems

Visitors

InnoRenew CoE hosted 28 international visitors in 2021. Eighteen visits were for five days or less, and ten visits were for a longer period. International visitors came from fourteen countries, including Austria, the Czech Republic, Estonia, France, Finland, Germany, Hungary, Lithuania, Montenegro, Poland, Sweden, Slovakia, Switzerland and the United States.

InnoRenew CoE international visitors in 2021 (1-5 days) / Obiskovalci InnoRenew CoE iz tujine (1–5 dni) v letu 2021

	Guest / Gost	Affiliation / Organizacija	Country / Država	Period / Čas obiska
1	Tobias Stern	University of Graz	Austria	08.07.2021-09.07.2021
2	Rapahela Hellmayer	University of Natural Resources and Life Sciences (BOKU)	Austria	03.08.2021
3	Oleksandr Prystopiuk	Department of Experimental Physics, Comenius University in Bratislava	Slovakia	12.08.2021-14.08.2021
4	Wolfgang Kantner	Metadynea	Austria	30.08.2021-01.09.2021
5	Felix Drexler	Metadynea	Austria	30.08.2021-01.09.2021

InnoRenew CoE's actions towards environmental, economic and social impacts

Sustainability is at the core of InnoRenew CoE's values, principles and activities. The institute works on research and innovation in the field of renewable materials and healthy built environments; therefore, sustainability and related topics are of great importance and InnoRenew CoE's researchers strive to make an impact environmentally, socially and economically.

Environment

In 2021, InnoRenew CoE continued its work on 36 research projects that contribute to sustainable development and the circular economy (see the table of projects on page 42). For example, the "Reverse logistics network of residual wood biomass" project investigates the optimization of supply chains considering environmental impact and energy cost with special attention to the field of reverse logistics, where raw materials can partly come from recycled sources instead of being used as energy resources. Also, the "Wood and wood products over a lifetime" (WOOLF) project explores the development of wooden structural and window systems to enable the construction of multistory modular wooden buildings.

InnoRenew CoE researchers published 319 scientific papers related to the topic of sustainability. The full list of publications can be found on page 132.

Further activities aimed at protecting the environment included:

- Collaboration with the Municipality of Izola, Slovenia Forest Service, Komunala Izola as well as Slovenia's Ministry of Agriculture, Forestry and Food and Ministry of Education, Science and Sport to finish planting 3,000 oak trees in Izola to contribute to the environmental protection and mitigation of climate change for society's sustainable development. The 3,000 oak trees will grow 1450 cubic meters of wood in 200 years, storing 2647 tons of carbon dioxide.

Aktivnosti InnoRenew CoE, ki vplivajo na okolje, družbo in gospodarstvo

Trajnostnost je ena ključnih vrednot, načel in aktivnosti inštituta. InnoRenew CoE se ukvarja z raziskavami in inovacijami na področju obnovljivih materialov in zdravega grajenega okolja in prav zato so teme, povezane s trajnostnostjo, za inštitut zelo pomembne. Z aktivnostmi v inštitutu si zaposleni prizadevajo pozitivno vplivati na vse vidike trajnostnosti: okoljski, družbeni in ekonomski.

Okoljski vidik

V letu 2021 je raziskovalni inštitut InnoRenew CoE nadaljeval z delom na 36 raziskovalnih projektih, ki prispevajo k trajnemu razvoju in krožnem gospodarstvu (glej preglednico projektov na strani 42). Med temi je na primer projekt »Povratna logistika biomase lesnih ostankov« s poudarkom na okoljskih vplivih in stroških energije. Posebna pozornost je namenjena področju obratne logistike, kjer surovine za proizvodnjo deloma pridobimo s pomočjo recikliranja. Ali pa projekt »Les in leseni izdelki v živiljenjski dobi (WOOLF)«, kjer razvijajo lesene konstrukcije in okenske sisteme, ki omogočajo gradnjo večnadstropnih modularnih lesenih objektov.

Raziskovalci v InnoRenew CoE so objavili 319 znanstvenih člankov na temo trajnosti. Celoten seznam objav je na strani 132.

Ostale aktivnosti, s katerimi v InnoRenew CoE prispevajo k varovanju okolja so:

- Sodelovanje z Občino Izola, Zavodom za gozdove Slovenije, javnim podjetjem Komunala Izola, Ministrstvom za kmetijstvo, gozdarstvo in prehrano in Ministrstvom za izobraževanje, znanost in šport za zaključek sajenja 3000 hrastovih dreves v Izoli. S tem je inštitut prispeval k varovanju okolja in blažitvi podnebnih sprememb za trajnostni razvoj družbe. S sajenjem 3000 hrastov bo v 200 letih zraslo 1450 kubičnih metrov lesa in shranilo 2647 ton ogljikovega dioksida.

Planting 3,000 oak trees in Izola /
Sajenje 3000 hrastovih dreves v Izoli

- Construction of the new InnoRenew CoE building, the largest wooden building in Slovenia, built from natural, renewable materials and designed based on sustainable building principles and restorative environmental and ergonomic design (REED), which emphasizes the use of natural materials to create ergonomic, accessible, adaptable and sustainable buildings.

InnoRenew CoE building /
Stavba InnoRenew CoE

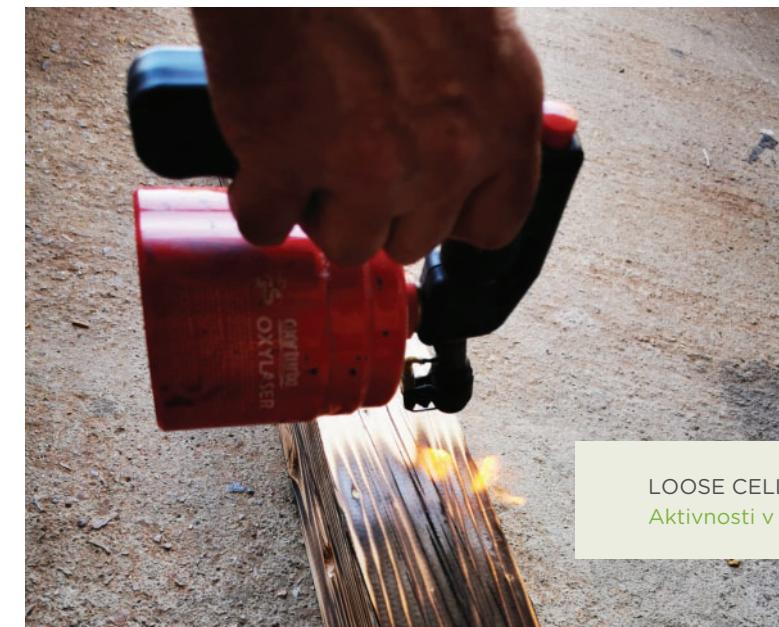

- Zaključek gradnje nove stavbe InnoRenew CoE, ki je tudi največja lesena stavba v Sloveniji. Zgrajena je iz naravnih in obnovljivih materialov, zasnovana pa je bila na načelih sodobne trajnostne gradnje in restorativnega okoljskega in ergonomskoga oblikovanje (REED), ki temelji na uporabi naravnih virov in ustvarjanju ergonomsko oblikovane, dostopne, prilagodljive in trajnostne gradnje.

InnoRenew CoE's 2021 activities ensured that social sustainability was not neglected:

- Completed and adopted InnoRenew CoE's Gender Equality Plan and further integrated the gender dimension into the institute's research.
- Evaluated for Slovenia's 2021 Business Excellence Award; recognized by EFQM with four stars (EFQM++++ certificate).
- Promoted wood with the "Let's explore wood" youth workshops and collaborated on a documentary about woodworking professions geared to a young audience.
- Developed solutions for the elderly; for example, Pharaon project activities and smart solutions like the smart floor system.
- Promoted a healthy and safe working environment with dedicated internal regulations and organized meetings and discussions about healthier lifestyles for employees.
- Offered possibilities for employees to attend professional trainings and workshops to assist their professional and personal development (see tables on page 92).
- Organized weekly meetings to share the institute's activities, research projects and special topics.
- Used and promoted the use of online channels for internal communication between all employees and encouraged their social interactions.

V letu 2021 so zaposleni z aktivnostmi inštituta prispevali tudi za razvoj družbenega vidika trajnostnosti:

- Zasnova in sprejem načrta za enakost spolov in dodatno vključevanje razsežnosti spola v raziskave inštituta.
- Ocenjevanje za pridobivanje priznanja Republike Slovenije za poslovno odličnost za leto 2021 in pridobitev certifikata s štirimi zvezdicami (EFQM++++).
- Promoviranje lesa in poklicev, povezanih z lesarstvom za mlajše, z dejavnostmi kot so delavnice Let's explore wood in sodelovanje pri pripravi dokumentarnih filmov s to tematiko.
- Razvoj bivanjskih rešitev za starejše, kot so na primer pametna tla ali aktivnosti projekta Pharaon.
- Promoviranje zdravega in varnega delovnega okolja, s posebnimi internimi pravilniki in z organiziranimi razpravami, posvečenimi zdravemu načinu življenja zaposlenih.
- Omogočanje udeležbe zaposlenih na izobraževanjih in delavnicah, za njihov strokovni in osebni razvoj (glej stran 92).
- Organiziranje tedenskih sestankov za obveščanje in razpravo o najnovejših dejavnostih inštituta, raziskovalnih projektih ali drugih temah.
- Uporaba in spodbujanje uporabe spletnih orodij za interno komunikacijo med vsemi zaposlenimi in s tem spodbujanje tudi njihovega družbenega in družabnega življenja.

- Attended events, such as Charm of Wood and Slovenian Wood Days, to engage in broader discussions and connect with stakeholders.
- Maintained memberships in organizations and associations that contribute to sustainable development (see tables on page 111).
- Promoted and engaged the public in topics related to sustainability and created awareness and calls for action with the institute's presence in the media and social media (see graphic on page 91).
- Collaborated with the local community; for example developed a solution for the protection of bronze monuments, assisted in the renovation of Koper's Servite monastery and created the LOOSE CELLS - Innovating at the Crossfield of Art and Science project.
- Collaborated with policymakers; for example, prepared the "Fit for 55" strategy, a green public procurement, implementation plan for the Slovenian industrial strategy, became a New European Bauhaus partner and developed industry and policy guidance on supporting the role of the forest sector in the circular bioeconomy (WoodCircus project).

- Udeležba na dogodkih kot je Čar lesa ali Dnevi slovenskega lesarstva in vključevanje v širše družbene razprave z deležniki.
- Članstvo v organizacijah, ki prispevajo k trajnostnemu razvoju (glej stran 111).
- Promoviranje in vključevanje javnosti v teme povezane s trajnostnostjo ter osveščanje in pozivanje k ukrepanju s prisotnostjo v medijih in na družbenih omrežjih (glej stran 91).
- Sodelovanje z lokalno skupnostjo in družbo, kot na primer razvijanje rešitve za zaščito bronastih spomenikov, ali obnova Servitskega samostana v Kopru ter ustvarjanje novih projektov, kot so Proste celice – Inoviranje v polju med umetnostjo in znanostjo.
- Sodelovanje z oblikovalci politik, na primer pri pripravi strategije Pripravljeni na 55 (Fit for 55), uredbe o zelenem javnem naročanju ali izvedbenem načrtu za slovensko industrijsko strategijo, partnerstvo v Novem evropskem Bauhausu in sodelovanje pri razvoju smernic za podporo vlogi lesarstva v krožni bioekonomiji za industrijo in odločevalce (projekt WoodCircus).

Economic

InnoRenew CoE works on research and development projects with industry through publicly financed projects and direct collaborations. The institute's 116 industrial partners in 2021 created new knowledge in the fields of wood modification, acoustics, environmental impacts and civil engineering. Researchers also trained companies within the framework of the KOCles 3.0 project.

Impacts from InnoRenew CoE's 2021 activities will be indicated in upcoming yearly reports.

Ekonomski vidik

InnoRenew CoE sodeluje z industrijo pri raziskovalnih in razvojnih projektih preko javno financiranih projektov in neposrednih sodelovanj. V letu 2021 so sodelovali z 116 industrijskimi partnerji, kar je prineslo nova znanja s področja modifikacije lesa, akustike, vplivov na okolje in gradbeništva. V okviru projekta KOCles 3.0 so raziskovalci inštituta izobraževali in usposabljali zaposlene iz številnih slovenskih podjetij, ki se pretežno ukvarjajo s predelavo lesa v najrazličnejše polizdelke in končne izdelke.

Učinki opisanih dejavnosti InnoRenew CoE v letu 2021 bodo navedene v prihodnjih letnih poročilih.

InnoRenew CoE employees publish with open access and make their publications available through the institute's Zenodo community.

In 2021, InnoRenew CoE researchers contributed to 319 scientific communications: 204 articles, 112 of which were original scientific articles, an increase of 22 from 2020; 11 review articles; four short scientific contributions; ten professional articles; one popular article; 66 conference contributions; 31 monographs, scientific or professional monograph chapters, front and back matter, master's and undergraduate theses and patent applications and patents; 38 public communications, including radio and television programs, invited lectures and unpublished conference contributions; and 46 secondary authorships, including as journal editors and thesis mentors.

InnoRenew CoE employee publications were cited (pure citations) 7714 times in Web of Science (6665 in 2020) and 10985 times in Scopus (4002 in 2020) last year.

Zaposleni v InnoRenew CoE prispevke objavljajo v odprttem dostopu, shranjeni (in dostopni) pa so v spletni skupnosti inštituta v rezervoriju Zenodo.

Raziskovalci InnoRenew CoE so v letu 2021 prispevali 319 enot s področja znanstvenega komuniciranja. Te vključujejo: 204 člankov in drugih prispevkov, od tega 112 izvirnih znanstvenih člankov, kar je 22 več kot leta 2020; 11 preglednih znanstvenih člankov; štiri kratke znanstvene prispevke; deset strokovnih člankov; en poljudni članek in 66 konferenčnih prispevkov; 31 monografij, znanstvenih ali strokovnih sestavkov v monografijah, spremne besede in druga dela, kot so dodiplomska in magistra dela, prijave patentov, patenti itd.; 38 radijskih in televizijskih nastopov, vabljenih predavanj in neobjavljenih konferenčnih prispevkov ter vabljenih konferenčnih predavanj; poleg tega pa še 46 del s sekundarnim avtorstvom (revijalni urednik, mentor pri zaključnih nalogah).

V letu 2021 so bile publikacije zaposlenih v InnoRenew CoE citirane (čisti citati) 7714-krat v Web of Science (leta 2020 pa 6665-krat) in 10985-krat (leta 2020 pa 4002-krat) v Scopusu.

InnoRenew CoE revenues totaled €3,913,201 in 2021. Of this, 45.21 percent was from the European Union's (EU) Horizon 2020 Framework Programme (H2020 Widespread-2-Teaming; #739574), 23.75 percent was from the Republic of Slovenia (investment funding from the Republic of Slovenia and the EU's European Regional Development Fund), 10.02 percent was from EU projects, 2.64 percent was from international projects, 11.39 percent was earned from market services, 0.53 percent was from international traveling grants (COST Actions), 0.43 percent was from national projects, 5.70 percent was funded by the Slovenian Research Agency (ARRS), 0.08 percent was from Living Lab InnoRenew activities and 0.25 percent was from other sources.

Investment into infrastructure was €9,437,171.

V letu 2021 je imel InnoRenew CoE 3.913.201 evrov prihodkov. Od tega je 45,21 odstotka prihodkov od okvirnega programa Evropske Unije Obzorje 2020 (H2020WIDESREAD-2-Teaming; #739574), 23,75 odstotka od Republike Slovenije (Financiranje naložb Republike Slovenije in Evropske unije v okviru Evropskega sklada za regionalni razvoj), 10,02 odstotka od pridobljenih evropskih projektov, 2,64 odstotka od drugih mednarodnih projektov, 11,39 odstotka od izvajanja storitev na trgu, 0,53 odstotka od akcij COST, 0,43 odstotka od nacionalnih projektov, 5,70 odstotka od projektov ARRS, 0,08 odstotka od dejavnosti Živega laboratorija in 0,25 odstotka drugih prihodkov.

Za investicijo v infrastrukturo je InnoRenew CoE leta 2021 namenil 9.437.171 evrov.
